In the year 2182, environmental degradation has taken its toll on Earth. Those who have managed to survive years of famine, drought and disease rally around an eccentric leader with plans to leave Earth and colonize a lush planet five light years away. Your team is among those who join the armada and flee Earth in search of a new home.

During the journey, disaster strikes your ship, and you are forced down onto a strange alien world, known as Exoplanet 1061. While this planet is Earth-like in many respects, it does not have any fossil fuels.

The planet appears hospitable. However, soon after you crash land, your team’s scientists discover it is merely a matter of time before one of the planet’s two suns goes supernova. Your team needs to survive to repair the ship, conduct research, and develop a means to produce rocket fuel so you can escape Exoplanet 1061 before it is too late.

**Objective:**

The object of this game is to build a society where you maintain enough food, water, and energy to grow your population and advance your technologies. While doing all this, you must also manage your waste buildup and survive the natural disasters and other chance events that may befall your community.

Resources are spread among a grid of cards you set up at the start of the game. You place buildings, upgrade technologies and collect resources on a turn-by-turn basis. To survive and win the game, you need to make sure you maintain sufficient levels of all resources and not build up your waste. The ultimate goal is to advance to Level Four and unlock the rocket fuel so you can leave the planet before it explodes.
GAME SETUP

Step 1: Assign Player Roles
Assign each of the roles below to one player on the team. (Note: If there are less than six team members, the same player can fill multiple roles. Easy roles to combine are Sanitation Specialist and Chance Operator.)

Fleet Admiral: This player’s role is similar to a banker. The Admiral oversees the resources on Exoplanet 1061. The Admiral hands out and withdraws the Resource Cards and Research Credits as needed during gameplay.

Chief of Operations: This player manages the Tabulation Board. The Chief of Operations must keep track of all the operational scores associated with the buildings and technologies your team acquires during the game. (See Calculating Operation Scores.)

Engineering Officer: This player manages the building cubes. After purchasing a new building, the Engineering Officer places an appropriately colored cube on the Habitat Card selected for the building. This player also keeps track of the advancing technologies.

Sanitation Specialist: This player oversees the Waste Pile Tracking Sheet. The Sanitation Specialist keeps track of the waste buildup and warns the team if it is approaching dangerous levels. (Note: If your team collects over 15 waste cards, you lose. See Managing Wastes.)

Chance Operator: This player oversees the Happening Cards. At the end of each turn, the Chance Operator draws a Happening Card, reads it aloud, then rolls the dice to determine the destiny of the team.

Resource Guardian: This player manages the team’s resources (except for the wastes). The Resource Guardian organizes, collects, and pays out the Resource Cards and Research Credits the team earns throughout the game to the Admiral.

Ship’s Scribe (optional): This player keeps a ship’s log. The Scribe records which critical decisions were keys to winning or losing the game.

Merchant Marine (optional): This player makes trades between teams. During defined trading periods, the Merchant Marines contact other teams and try to trade resources.

Step 2: Hand Out Resources and Research Credits
The Admiral sorts the Resource Cards and Research Credits into piles. The Admiral then hands out the following cards to the Resource Guardian:

• 5 Energy Resource Cards
• 5 Food Resource Cards
• 5 Water Resource Cards
• 5 Wood Resource Cards
• 5 Ore Resource Cards
• 1 Research Credit

Step 3: Set Up Habitat and Happening Cards
The Sanitation Specialist shuffles the Habitat Cards, and then lays them face down in a board shape that is six columns wide by five rows high. These cards have resource values between 1 and 5.

The Chance Operator shuffles the Happening Cards and places them face down in a pile.

Step 4: Organize Building Cubes
The Engineering Officer sorts all the Building Cubes by color. Refer to the Technology Map to see which tech category each color represents. (See Reading the Technology Map.)

Step 5: Hand Out Tabulation Board, Waste Pile Tracking Sheet, and Technology Maps
The Chief of Operations receives the Tabulation Board and places all the paper clip markers at ‘0’.
Step 6: Place Initial Colony
As a team, select a Habitat Card where you want to place your first colony and flip the card over. The Engineering Officer then puts a white cube on this card to mark it as a colony. You may not access any of the resources on colony cards.

Helpful Hint:
Placing your initial colony near the center of the cards helps you uncover more cards in fewer turns.

The Chief of Operations refers to the Technology Map and then records the operation score on the Tabulation Board. **Note:** Only tabulate the operation score. (See *Reading the Technology Map* and *Tabulating Operation Scores.*

Once you place the colony, turn over the cards directly adjacent to it. This includes any cards touching the top, bottom, right or left of the colony card. It does NOT include diagonally touching cards.

Step 7: Place Initial Infrastructure
Work as a team to decide where you want to place the initial infrastructure buildings. These buildings include a farm, well and an electrical power plant. You MUST place these buildings on a Habitat Card that shows a corresponding resource.

For example, you can only place farms on cards with a Food resource. Similarly, you can only place a well on a Habitat Cards with water resources, and you can only place electrical power plants on cards with an energy resource.
The Engineering Officer places a colored cube on the Habitat Card the team has chosen to mark the locations of your farm (pink), well (blue), and electrical power plant (orange).

The resource score shown on the Habitat Card indicates what “+Card Score” to add to the tabulation board. While most Habitat Cards show two resources, you can only build on one of them. Choose wisely, and only record the resource scores of the one you choose on the Tabulation Board.

Place one building at a time. After placing a building, immediately turn over the adjacent cards to reveal more resources before moving on to placing the next building.

For each building placed, the Chief of Operations then refers to the Technology Map and adds the operation score of the building to the Tabulation Board. Repeat until you place all three buildings. (See pic, page 3.)

Note: If the specific Habitat Card with a building’s resource type is not available, you can wait until you turn over the necessary Habitat Card in general gameplay. However, you must place the building if there is an available matching Habitat Card.

**GENERAL GAMEPLAY**

After the Game Setup is completed, each turn proceeds in three parts. You MUST perform the steps in the order listed below.

**Step 1: Resource Allocation and Collection**
The Admiral dispenses Resource Cards from the Resource Bank, based on the Tabulation Board records, to the Resource Guardian. The Sanitation Engineer receives any waste resource cards (solid waste and liquid waste) and puts them on the Waste Pile Tracking Sheet.

Note: If there is a negative score associated with any resources, the Admiral collects those resources or waste cards from the Resource Guardian or Sanitation Engineer, and places them back into the Resource Bank. (See **Managing Wastes**.)

**Step 2: Research and Construction**
During this portion of the turn, you may purchase or unlock building upgrades and Research Credits. You can purchase/place up to three buildings or technology upgrades per turn. You can also purchase up to two Research Credits per turn.

To add a building or technology upgrade refer to the building costs listed on the Technology Map. The Resource Guardian pays the building costs to the Admiral, and then the Engineering Officer places a building cube on the Habitat Card that the team chooses. After adding each building, the Chief of Operations refers to the Technology Map and adds the building’s operation score to the Tabulation Board. Remember, after placing a building, flip over any adjacent cards to reveal more resources.

**UNLOCKING LEVELS:** Upgrades must proceed sequentially; you must have bought and placed a Level One technology prior to buying and placing the Level Two upgrade. Level Two upgrades must be bought and placed prior to adding Level Three upgrades, etc.

**Helpful Hint:** Use Research Credits to upgrade technologies. Each Research Credit costs two Food Resource Cards, two Energy Resource Cards, and two Water Resource Cards. Purchase them from the Admiral.

To unlock building upgrades, you MUST first have purchased and placed the required number of colonies required by the next level. (See **Reading the Technology Map** and **Unlocking Upgrades**.)

Once a level is unlocked, you can then purchase
technology upgrades for your buildings in that level. To purchase an upgrade the Resource Guardian must pay the upgrade cost to the Admiral. The Engineering Officer then places another cube on the card that contains the upgraded building. The Chief of Operations refers to the Technology Map and adds the operations score to the Tabulation Board.

Step 3: Happening Cards
Lastly, the Chance Operator draws a single Happening Card from the top of the pile and reads it aloud. The Chance Operator then rolls the dice and follows the directions as indicated on the card.

Repeat steps one through three for each turn until you win or lose the game.

Helpful Hint: Depending on the roll of the dice, Happening Cards can result in your team losing or gaining up to three Resource Cards or losing or gaining a Research Credit. Wastes may also be added to or removed from the waste pile.

Winning (or Losing) the Game:
To win the game you must advance to Level Four and upgrade your biofuels plant so it can produce Rocket Fuel. Place the rocket figurine on the Habitat Cards to symbolize victory and your team’s escape from Exoplanet 1061.

Remember! Once you place the rocket, you still must draw your final Happening Card. So, make sure there are spare resources available in case of a negative outcome.

Your team can lose the game in two ways. You lose if at any point, you run out of energy, food, or water resource cards. You can also lose if your waste pile overflows. Collect more than 15 combined solid and liquid waste resource cards, and you lose.

Zombie Attack
Zombies are on the loose!
Roll an even number and the zombies turn out to be friendly and help you find water. Gain 3 water.
Otherwise, they cause massive damage before they are stopped. Lose 1 energy, 1 food and 1 water.

Depending on the roll of the dice, Happening Cards can have both good and bad outcomes.

Winning the game by getting to Level Four and making rocket fuel.
Reading the Technology Map: This map is a guide to help you purchase buildings and technologies, advance to new levels and keep track of the building costs and technologies operation scores. Each vertical column in the Technology Map refers to a specific technology category. At the top of the color of the technology and corresponding cube color is listed.

At the start of the game, you have access to Level One technologies.

The **Building Cost** on the map lists the resources you need to purchase a building or technology upgrade. Pay the building cost to the Admiral, receive a building cube and place it on the selected Habitat Card. (See circled above.)

The **Operation Score** shows the amount of resources needed for each building or technology. Record these scores on the Tabulation Board. (See circled above.)

There is a **+Card Score** for water, food, energy, wood and ore categories. These scores tie directly to the resource value listed on the Habitat cards. Add this card value to the Tabulation Board. For example, if you build a mine on a Habitat Card that has an Ore 4 score, you would add four ore to the Tabulation Board. (See circled sections above.)

**Purchasing and Placing Structures:**

Listed on the Technology Map is the resource cost of each building or technology upgrade. The Resource Guardian pays the necessary resources to the Admiral. The Engineering Officer then places the appropriate colored building cube on the Habitat Card your team has chosen. The Chief of Operations then adds the building’s operation score (listed on the Technology Map) to the Tabulation Board. Finally, your team should turn over the adjacent cards to reveal more resources.
Tabulating Operation Scores:
Each building and upgrade is associated with a specific plus or minus operation score. You can find these scores on the Technology Map. You must add these scores to the Tabulation Board after you place the building or technology upgrade. To do this, slide the paper clip the number of positions specified, left for minus scores and right for plus scores. For example, if there is a ‘Food -2’ score, slide the paper clip on the food column two positions to the left. If there is an ‘Energy +3’ score, slide the paper clip to the right three positions.

Some building categories (e.g. farms, wells, solar energy plants) directly tie to the resources scores listed on the Habitat Cards where you place the buildings. These buildings also have a + Card Score on the Technology Map. To record these values on the Tabulation Board, slide the paper clip to the right according to the resource number on the card. You cannot build or add an upgrade if it takes your Tabulation Board score beyond -7 or +10 in any resource category.

Unlocking Levels:
To unlock any of the technologies on Levels Two through Four, you must first build additional colonies. Level Two requires two colonies, and Levels Three and Four require three colonies. Once you have the required number of colonies for a level, you will also have to pay Research Credits for each technology upgrade. Upgrades in Level Two cost one Research Credit. Level 3 upgrades cost two Research Credits, and Level Four upgrades cost three Research Credits. You must upgrade your technologies in sequential order. No skipping to the rocket!

Upgrading Buildings:
Begin by following the directions for Purchasing and Placing Buildings. When you upgrade a building technology in a different level, mark the upgrade by adding an additional cube in its corresponding color.

Purchasing Research Credits:
Research credits cost two energy resource cards, two water resource cards, and two food resource cards. Pay these to the Resource Bank.

Managing Wastes:
The solid and liquid wastes your team collects go into the waste pile. If you collect MORE THAN 15 of these cards, your team loses. You can build liquid and solid waste plants to manage this problem. If you have a negative score on the Tabulation Board in either of the waste categories, the waste plants can only remove that specific type of waste from the pile. It is important that the Sanitation Specialist keep track of growing waste problems before they wipe out your team.
Game Play Variations

Race Against Time:
In this setup, teams have a set time (anywhere between 45 minutes to an hour and a half) to get off the planet. The number of turns do not matter, but quick and efficient decisions are critical. The first team to beat the game wins.

Day by Day:
In this setup, teams count the total number of turns needed to achieve victory. The team able to win in the fewest turns wins.

Pack It In. Pack It Out:
In this version, use a variety of metrics to rank teams. Teams receive one point for each Level Two technology and two points for each Level Three technology they acquire. For each waste card left in the waste pile, the team loses one point.

Happy Hour:
In this version, multiple teams sync the timing of each turn. After every third turn, allow a trading period. Trading periods generally last around five minutes. Trading is free and open. This is a great way to encourage intergroup communication.
