PTW: Potato Tuberworm  PA: Potato Aphids
BLH: Beet Leafhopper  GPA: Green Peach Aphid
OLH: Other Leafhopper  OA: Other Aphids

FYI
Aphids-Part I
• Aphids may transmit virus disease
• Two common species in eastern Oregon: Green Peach Aphid and Potato Aphid
• Potato aphid is generally more common in the spring and fall
• Green peach aphid peaks during July and early August.

More information regarding aphids next week.

This is the oviparous female (big female that lays eggs), nymph (immature stage), and egg of Macrosiphum euphorbiae a.k.a Potato Aphid. Photo credit. A. Jensen (WSPC).

Current and historical data at:
http://oregonstate.edu/dept/hermiston/trap-reports
OSU-HAREC Entomology:
http://oregonstate.edu/dept/hermiston/entomology-laboratory

No late blight has been confirmed other than on seed planted in the region. Due to late blight risk (continued cool and wet weather) use of protectant fungicides 7-10 days prior to row closure are recommended.

LATE BLIGHT HOTLINE
1-800-705-3377

The OSU Area-wide monitoring program support is provided by the Oregon Potato Commission and OSU Extension Service. This is an alert system; growers are encouraged to install their own traps for field specific monitoring.
