

**Report to the Oregon Processed Vegetable Commission  
2003-2004**

1. Title: Green Bean Breeding and Evaluation
2. Project Leaders: James R. Myers, Horticulture  
Brian Yorgey, Food Science and Technology
3. Project Status: Terminating 30 June, 2004
4. Project Funding:

\$50,151	breeding
\$19,822	processing
\$69,973	total

Breeding funds were used for a major portion of the support of a vegetable breeding technician, student labor, supplies, and research farm expenses. Processing funds were used for processing samples of experimental beans, laboratory analysis, and for student labor.

5. Objectives:
  - i. Breed Bush Blue Lake (BBL) green bean varieties with high economic yield and improved plant architecture.
  - ii. Improve pod characteristics including straightness, color, smoothness, texture, flavor and quality retention, and combine with delayed seed size development.
  - iii. Incorporate white mold resistance and improve root rot tolerance while maintaining resistance to bean common mosaic virus.
  - iv. Develop a molecular marker map to facilitate marker-assisted selection of desirable horticultural traits.

6. Report of Progress:

Bean breeding lines and commercial varieties were tested in replicated trials planted 2 May, 15 May, 2 June, 12 June and 24 June. The advanced trials planted 2 May and 2 June consisted of three check varieties and 12 advanced lines planted in two-row plots replicated six times. The 15 May and 24 June trials were preliminary trials, and consisted of one row per entry replicated two times. We altered the preliminary trials in 2003 to screen larger numbers of lines by reducing number of reps so that we could increase number of entries. These trials had three check varieties and 83 and 81 experimental lines, respectively. The 12 June trial consisted of four check varieties (two full sieve, and two small-sieve green beans), six OSU lines, and 14 commercial entries (all green beans except for one wax Romano, and one green Romano) from three seed companies.

For advanced and commercial trials, five-foot sections of row were hand-picked on each harvest date in each of four replications. In most cases, three harvests on alternate days were made to obtain a range of maturity. Replications were combined for grading. For the 15 May and 24 June preliminary trials, five foot sections of two replicates were harvested only once at harvest maturity. Data from replicated yield trials are summarized in Tables 1 - 18 and Figures 1 - 11. Root rot and white mold disease nursery data can be found in tables 19-22.

Samples were canned and frozen at the Food Science and Technology Pilot Plant for evaluation by industry representatives in February. Processed quality data will be published in a separate report.

Overall, growing season in 2003 was significantly warmer than previous years. High temperatures that affected pod set and yields were encountered during July, and split set was observed in the 2 June trial. The 24 June trial (maturing in late August) exhibited very lush growth with increased lodging. In spite of the lodging and matting of plants, white mold infection did not become severe.

Advanced Standard Sieve OSU Lines: For full sieve advanced lines, OSU 5630 showed exceptional performance, followed by OR 54, and OSU 5635 and OSU 5669 (summary table above and right, Tables 1-5; Figures 1-3, 10). OR 91G generally had the lowest yields. In terms of long term yield averages, OSU 5635 was similar to OR 54, followed by OSU 5669. Long term tons/acre and \$/acre values for OSU 5669 were significantly higher than OR 91G. In addition, OSU 5669 has more uniform, and improved pod color straightness and smoothness. While OSU 5635 has yield potential similar to OR 54, it is more sensitive to heat.

Five year averages for yield and \$/A values are shown (right) for full sieve advanced lines and checks. Also shown (next page) are number and percent of trials in which advanced lines outperformed the checks, as well as yield advantage over the check varieties. An experimental line would be equivalent to a check cultivar if it outperformed the check in 50% of

<sup>y</sup>Overall T/A of selected lines as a percent of OR 54.

the trials with an equivalent (100%) overall yield of the check cultivar. OSU 5669 (OSU 5256 x OR 54) demonstrated its yield superiority by exhibiting greater yields than OR 91G in 73% of 30 trials conducted over the past five years and out-yielded OR 91G on average by 106%.

OSU 5635 (OR 54 X OSU 5163) out-yielded OR 91G by 111% in 85% of 33 trials, and out-yielded OR 54 55% of the time with overall yield 101% of the check. OSU 5630 (OR 54 x OR 91G) had yields higher than OR 91G in 62% of 26 trials with yield 104% of OR 91G. While not tested in many trials yet, OSU 5706 (an OSU 5256 x OSU5416 cross) appears to have yield potential similar to OSU 5630. Apart from OSU 5635, no other advanced line had yields equivalent or better than OR 54.

Other lines for which multi-year data are available include OSU 5699 (OSU 5256 x OR 54), and OSU 5996 (OR 54 x Hypak). These lines have been tested for four years in the case of OSU 5699 and two years for OSU 5996. Both appear to be lower yielding than either check cultivar. While neither may be suitable as a cultivar for release, OSU 5996 is of interest because of its more upright plant architecture and persistent green pods.

Of the advanced lines, OSU 5630 and OSU 5669 are nearest release. Both show clear advantages to OR 91G in terms of processing quality and yield. There has been a question of hardseededness with OSU 5669 when grown in the intermountain region, but seed moisturized here in the Willamette Valley has acceptable germination. As long as this characteristic of OSU 5669 is managed, it should be a cultivar that provides an advantage over OR 91G.

Other standard sieve lines: Two other lines were included in advanced trials: OSU 5989, and OSU 6002 (Tables 1 – 5). Both are derived from OR 54 x Hypack, and both are persistent chlorophyll types. Neither line had any yield advantage over the traditional BBL types but both have very nice pod quality attributes that should be retained in the breeding program.

Our bottleneck in the breeding program is the ability to evaluate large numbers of breeding lines in a way that allows us to efficiently funnel the best lines in advanced trials. Many of the lines now reaching homozygosity are from BBL x non BBL crosses, and while carrying desirable traits, may lack certain processing characteristics or yield equivalent to existing Oregon BBL lines. To assist in giving larger quantities of material a first look, we conducted two preliminary trials this season with the same set of approximately 100 entries in each. To accommodate the workload, we had to reduce the number of rep-

licates and the number of sequential harvests. Therefore, the data are not as accurate, but can allow us to eliminate the worst 50%.

Of the lines shown in tables 11, 13, 15 and 17, the 6100 and 6200 series represent crosses of Oregon BBL lines to either Maxima or Minquette. Very few of the Maxima crosses appear useful, but the Minquette crosses are represented by a number of lines with improved plant architecture and darker green pod color. The four best preliminary lines are: OSU 6104 (Maxima x OSU 5256), OSU 6126, OSU 6137 (both Minquette x OR91G), and OSU 6193 (Minquette x OR 54). These lines had the best overall scores for yield, maturity, growth habit, pod concentration, and pod quality characteristics. OSU 6204 is another line with good performance, but pods may be too oval. These trials appear useful in

making a first cut in the preliminary materials.

Small Sieve Beans: (Tables 6-8, 12, 14,16,18, Figures 4-6, 11). OSU 5613, and Minquette were used as checks for comparison to small sieve beans. Minquette produces a majority of three and four sieve beans while OSU 5613 produce three sieve as the largest class. In advanced trials, OSU 5835 (OR 54 x OSU 5446), and OSU 5944 (OSU 5446 x Teseo) were again tested, and both showed very good yields.

The former is a four-sieve bean whereas OSU 5835 has excellent pod attributes except for pod cross-section, which is heart to round in shape. It is the best of the OSU 5446 crosses for pod quality, and has yield superior to all other small sieve beans (equivalent to full sieve beans in many cases). It had among the highest \$/A values of the small sieve green beans in 2003 (tables, right). In four years of 11 trials, OSU 5835 outperformed Minquette in 91% of trials with a yield advantage of 142% (table next page). OSU 5944 has excellent pod quality, including a dark green color, and would be a suitable replacement for the Medinah class of small sieve beans. It also had excellent \$/A values, averaging higher

<sup>z</sup>Average of 2 trials each year. Yields are field yields.

than OSU 5835. OSU 5902 and OSU 6100 were also tested in advanced trials. OSU 5902 (OSU 5446 x Teseo), is a sister line to OSU 5944 with high quality pods and similar yields. OSU 6100 (OR 91G X Maxima), has sieve size distribution similar to OSU 5835, but somewhat lower yields. It has long round pods and might represent a compromise between yield and pod quality that OSU 5835 does not possess.

In preliminary trials, 51 entries with BBL x Minquette background were evaluated. Seventeen of the entries appear to have performed well in both trials (highlighted in Table 12). These entries range in maturity, with most being high yielding in both trials with

good pod quality characteristics and good plant growth habit. Nearly ¾ of the lines selected from the BBL x Minuette crosses are small or intermediate sieve size. While we would have liked to have seen greater numbers of standard sieve size lines, several factors appear to bias the population towards small sieve size.

First, large pods are controlled by a recessive genetic factor such that in any sample from a segregating population from a cross between a large- and a small-sieve line, only ¼ of the progeny will be full sieve. Secondly, it appears difficult to combine high yield with large, long pods and upright growth habit. It is much easier to obtain plants with good growth habit that resist lodging when they have small pods. Small pods are also usually associated with shorter pod length and lower yields – both traits associated with reduced lodging. From this first round of selections, we hope to obtain useful lines that recombine full sieve size with high yields and good growth habit, but backcrossing of this material to BBL material will be needed to further improve existing cultivars. We will be culling small and intermediate sieve lines rigorously to allow greater focus on the full sieve materials.

Commercial Bean Trial: Varieties supplied by private breeders were grown in a commercial trial planted on 12 June (Tables 9 and 10, Figures 7 and 8). In this trial, the highest yielding group were the Oregon BBL lines. Comparable in yield were two related lines (SB 4249 and SB 4257). The former has been tested for four years and appears closest of any of the commercial lines to a BBL type. WBL 434 had relatively high yields for its sieve size class. This trial was exposed to heat during bloom and pod fill as evidenced by the very poor yield of the check, Minuette. Romano Gold had 10 T/A yields and appears adapted to the valley.

Molecular Mapping Research: The OSU 5630 x Minuette recombinant inbred population was not grown this year, but molecular mapping continued with the placement of additional molecular markers and quantitative trait loci on the map. The map now consists of 124 markers in 12 linkage groups (bean has 11 chromosomes) for a total map length of about 400 cM (complete linkage maps of bean are about 1700 cM in length). A number of traits, including pod color, length, width, size, fiber, plant height have been mapped. One region on linkage group 7 appears to have a major effect on pod shape and fiber. Evidence is accumulating that different sets of genes control the snap bean phenotype in Oregon BBL beans compared to Midwestern derived snap beans.

Root rot and white mold trials: The root rot nursery was expanded in 2003 to include 326 lines (14 checks and 312 experimental lines) (Table 19). The majority of these lines were derived from three single seed descent derived populations of BBL parents (OR 54, OR 91G and OSU 5613) crossed to the root rot resistant kidney bean germplasm line FR 266

developed by the USDA-ARS bean breeding program at Prosser, Washington. Each line was replicated once with readings taken from two samples per plot where enough plants were available. Germination was reduced and plants were somewhat stunted in the trial, which enabled us to get a useful reading on the root rot resistance potential of lines. Data on proportion of roots infected were collected at physiological maturity. Growth habit, pod fiber, and overall plant vigor was also noted. The resistant check RR 6950 had an overall rating of 0.5 (on a 1 – 5 scale), the susceptible OSU 5446 was rated 3.6, and OR 91G had an intermediate rating of 2.0. Ten lines had ratings of 1.8 or less. Scores for each population were normally distributed. We discarded approximately half the lines and will retest the remainder again next year.

The white mold nursery contained 178 breeding lines and 32 check entries. Our major effort was to evaluate a series of backcross-inbred derived lines that incorporated white mold resistance from several sources into an Oregon BBL background. These lines had been developed in previous years with selection using the greenhouse based straw test assay for white mold resistance. Lines were replicated twice in the 2003 nursery with regular checks included in each tier. Lines were rated at maturity for severity of white mold infection (Table 20). One cross combination [OSU5669/(OSU5669/(OR91G/Asher 1-DR)F<sub>1</sub>)F<sub>2</sub>-11, plots 6304 – 6368] appeared entirely devoid of resistance, but other cross combinations had about ¼ to ½ of the plants with some degree of resistance. These lines are very close to the BBL type and if sufficient seed is available, should be advanced to preliminary trials next year.

Overall white mold infection this year was somewhat lower than past years, presumably due to the higher summer temperatures. As a result, interaction between growth habit and infection played a larger role as shown in Tables 21 and 22. Relative ranking for resistance stayed mostly the same over the past five years (Table 22).

Development and evaluation of new materials: Selection continues in the Oregon blue lake X Minuette crosses to obtain lines with improved architecture. Many selections from these crosses also have extremely dark green pods. This material was harvested as small bulks, so seed will be available for testing in replicated trials next year. Other crosses have been made, and populations are being advanced for white mold resistance, additional sources of improved architecture and general population improvement within the blue lake background.

## 7. Summary:

Five yield and processing trials were conducted at about two week intervals during 2003. Data from two advanced trials support release of OSU 5630 and OSU 5669. Among small sieve lines, OSU 5835 (a four sieve bean) and OSU 5944 (a three sieve line) are of interest. Two preliminary line trials, consisting of approximately 100 lines, were grown to evaluate BBL x Minuette crosses. A trial of mostly commercial varieties was also planted in mid season. A number of promising lines of all sieve sizes were tested in preliminary trials. Many of these have combined the good pod quality of the BBL types with the superior plant architecture of Minuette. Three populations based on crossing BBL materials to FR266, a root rot resistant kidney bean were evaluated for root rot resistance. A series of backcross inbred derived lines were evaluated in white mold trials. A number of these lines have partial white mold resistance in a BBL background.

<sup>z</sup>Dollar values were calculated using the weight of graded beans, based on a value of \$119 for 1-4 sieve pods; \$44 for 5 and 6 sieve pods. Values will be lower than those reported in Table 5 because some beans are lost in the grading process.

<sup>y</sup>Average \$/acre is a rough estimate because of non-uniform number of harvests included.

<sup>z</sup>Percent calculated as % of total of 1-6 sieve beans.<sup>y</sup>Total tons/acre of the graded beans, including sieve sizes 1-6. Values will be lower than those reported in Table 10 because some beans are lost in the grading process.<sup>x</sup>\$/acre based on \$119/ton for 1-4 sieve and \$44/ton for 5-6 sieve for full sieve beans; \$84/ton for 1-4 sieve and \$33/ton for 5-6 sieve for 4 sieve beans; and \$86/ton for 1-4 sieve and \$0/ton for 5-6 sieve for 3 sieve beans.

<sup>z</sup>Based on one selected harvest for each variety (marked with \* on Table 9), which was the harvest closest to optimal based on that variety's intended use (50% 1-4 sieve for full sieve). Yields are field yields of 1-6 sieve beans.

<sup>y</sup>Full sieve beans were adjusted to 50% 1-4 sieve; all others were unadjusted.

<sup>z</sup>Mean of 2 replications; subplots of 5' were harvested from single 20' plots in rows 30" apart.  
Shaded entries are the most promising lines.

<sup>y</sup>Percent calculated as % of total of 1-6 sieve beans.

Table 13. Notes on preliminary full sieve green bean lines, May 15 planting, Corvallis, 2003.

Line	Plant Height (cm)	Growth Habit Preliminary <sup>z</sup>	Growth Habit at Harvest <sup>z</sup>	Pod Length (cm)	Pod Straightness <sup>y</sup>	Pod Cross Section <sup>x</sup>	Pod Smoothness <sup>w</sup>	Shiny or dull	Pod Color <sup>v</sup>	Notes <sup>u</sup>
91G	30	3	1	14.0	5	round	5	dull	5	some seed development in 5 & 6 sv
OR54	39	4	3	16.0	3	round to cb	5	dull	6	seedy 6 sv, moderate seed development in 5 sv
5630	28	3	2	16.0	4	round to cb	5	dull	5	seedy 6 sv, 5 sv mixed seed development
5635	33	5	2	14.5	7	round to cb	3	dull	5	seedy 6 sv, 5 sv moderately seedy; straight pods in lower sieve sizes
5669	40	4	4	14.5	5	round	5	dull	5	seedy 6 sv, moderately seedy 5 sv, seed development in 4 sv; segregating for flats
5699	43	4	6	15.0	5	round	5	dull	5	seedy 6 sv, some seed development in 5 sv; typical bush blue lake type
5706	31	4	3	15.0	1	round to cb	5	dull	5	seedy 5 & 6 sv, 4 sv OK
5996	44	6	4	13.5	5	round to cb	8	dull	7	oval off type, shows up mostly in 4 sv or smaller; 6 sv seedy, 5 sv moderately seedy, some pods in 4 sv developing seeds mixed seed development in 6 sv, 5 sv moderately seedy; pc type but may be mix
5980	37	4	2	15.5	3	round	7	dull	7	
5989	48	6	5	13.0	7	round to cb	9	dull	7	5 & 6 sv seedy, 4 sv OK; pc type
5998	38	4	3	13.0	8	round	9	semi shiny	7	some seed development in 5 & 6 sv
6104	47	7	6	13.0	7	round	7	dull	5	seedy 5 & 6 sv, moderately seedy 4 sv
6126	39	6	7	15.0	3	round to cb	9	dull	7	moderate seed development in 6 sv, 5 sv OK
6134	42	6	7	16.0	3	oval to round	3	dull	7	6 sv seedy, 5 sv mixed seed development; should have been harvested 7/24 but missed because of lack of seed development; oval tendency
6137	47	5	5	14.5	5	round	1	shiny	9	seedy 6 sv, mixed seed development in 4 & 5 sv; quite bumpy, might be better if harvested earlier
6152	34	5	4	15.0	5	round	7	dull	7	moderately seedy 6 sv, seed just developing in 5 sv
6165	29	5	3	15.5	5	heart to round	7	dull	7	seedy 6 sv, mixed seed development in 5 sv
6169	40	7	4	15.5	3	round to cb	5	dull	6	5 & 6 sv seedy, seeds developing in 4 sv

Table 13. Notes on preliminary full sieve green bean lines, May 15 planting, Corvallis, 2003 (cont.).

Line	Plant Height (cm)	Growth Habit Preliminary <sup>z</sup>	Growth Habit at Harvest <sup>z</sup>	Length (cm)	Straightness <sup>y</sup>	Cross Section <sup>x</sup>	Smoothness <sup>w</sup>	Shiny or dull	Color <sup>v</sup>	Notes <sup>u</sup>
6170	45	6	5	17.0	5	round to cb	8	dull	8	moderate seed dev in 5 & 6 sv; very large podded bean, up to 21 cm.
6176	40	6	4	15.0	3	round	6	dull	6	seedy 6 sv, mixed seed development in 5 sv
6183	51	5	6	13.0	4	round to cb	5	shiny	7	6 sv seedy, mix of seedy and not in 5 sv, some 2 tone in color
6185	37	5	3	13.5	3	round	5	shiny	9	slight seed development in 6 sv, 5 sv OK
6189	33	7	8	15.5	3	round	7	dull	5	Moderate seed development in 5 & 6 sv, 4 sv ok
6193	47	7	4	14.0	3	round to cb	3	dull	7	Moderate seed development in 5 & 6 sv; strong internal cavitation and long seed cavity that is incompletely filled by the seed, which lead to bumpiness
6195	57	9	8	15.0	5	round to cb	7	dull	6	6 sv seedy, 5 sv moderately seedy, 4 sv beginning; strong color gradient around suture
6204	60	7	8	15.5	5	heart	5	dull	5	very seedy 6 sv, 5 sv becoming seedy; mix with light colored, very straight oval
6207	54	7	7	13.5	5	round	3	dull	5	6 sv seedy, 5 sv developing seed, 4 sv generally not seedy
6212	49	8	7	12.0	7	round to cb	7	dull	4	seedy 6 sv, 5 sv developing seed, 4 sv OK; color variable
6226	49	7	6	15.5	4	round	7	dull	7	seedy 6 sv, moderately seedy 5 sv; seeds long and not obtuse even when fully developed

<sup>z</sup>Scores based on 1-9 scale with 9 = most upright. Preliminary growth habit readings taken July 17; harvest readings taken day of harvest.

<sup>y</sup>Scores based on a 1-9 scale with 9 straightest

<sup>x</sup>Cross section: cb = crease-back

<sup>w</sup>Scores based on a 1-9 scale with 9 smoothest

<sup>v</sup>Scores based on a 1-9 scale with 9 darkest

<sup>u</sup>Notes: sv = sieve; pc = persistent color

Table 14. Notes on preliminary small sieve green bean lines, May 15 planting, Corvallis, 2003.

Line	Plant Height (cm)	Growth Habit Preliminary <sup>z</sup>	Growth Habit at Harvest <sup>z</sup>	Pod Length (cm)	Pod Straightness <sup>y</sup>	Pod Cross Section <sup>x</sup>	Pod Smoothness <sup>w</sup>	Shiny or dull	Pod Color <sup>v</sup>	Notes <sup>u</sup>
Minuette	41	7	5	11.0	7	round	7	shiny	5	seedy 5 sv, mixed seed development in 3 & 4 sv
5613	38	5	4	10.5	7	heart to round	5	dull	5	seedy 4 sv, 3 sv moderately seedy
5835	31	5	5	12.5	5	heart	7	dull	5	segregating flats; seedy 5 sv, 4 sv developing seed
5944	34	4	3	10.0	7	round	7	dull	5	moderate seed development in 4 sv, 3 sv OK
5902	40	5	5	12.0	8	round	6	shiny	4	moderate seed development in 4 sv
6100	47	4	2	12.0	3	round	7	dull	3	seedy in 5 sv, moderately seedy in 3 & 4 sv
						round to heart to slightly oval	9	dull	9	5 sv moderately seedy, 4 sv some seediness; some 2 tone pods; excellent interior color
6008	49	5	6	11.5	9	oval to round	3	dull	4	seedy 6 sv, moderate seed development in 5 sv, 4 sv OK
6094	47	4	5	15.0	5	oval to round	5	dull	3	seedy 4 sv, mixed seed development in 3 sv; oval mix
6118	40	5	4	12.5	7	round	7	dull	5	5 sv seedy, mixed seed development in 4 sv
6123	38	5	6	11.5	5	heart	7	dull	5	5 sv moderately seedy, mixed seed development in 4 sv
6127	50	7	7	12.5	3	round	7	dull	7	large sv mix; moderately seedy 4 & 5 sv
6128	49	8	8	14.5	7	heart	7	dull	7	seedy 5 sv, seed development beginning in 4 sv
6129	44	7	6	15.0	5	heart	7	dull	7	5 sv very seedy, 4 sv moderately seedy, concentrated set
6130	40	7	7	14.0	3	round	5	dull	6	seedy in 5 sv, 4 sv OK ; long slender pods; very attractive
6131	44	5	7	15.0	7	round	9	dull	7	very seedy 6 sv, 5 sv shows mixed seediness, seed developing in 4 sv
6138	42	6	4	14.5	3	round	3	dull	5	seedy 5 sv, mixed seed development in 4 sv
6140	38	7	6	10.0	5	heart	9	shiny	5	seedy 5 sv, mixed seed development in 4 sv; very concentrated set
6141	43	7	6	11.0	7	round	6	shiny	5	moderate seed development in 5 sv, seed development beginning in 4 sv, may mature with more 5 sv
6142	39	7	6	10.5	8	heart to round	9	shiny	7	seedy 5 sv, seed developing in 4 sv, 3 sv OK
6143	41	7	7	9.0	8	round	7	dull	6	

Table 14. Notes on preliminary small sieve green bean lines, May 15 planting, Corvallis, 2003 (cont).

Line	Plant Height (cm)	Growth Habit Preliminary <sup>z</sup>	Growth Habit at Harvest <sup>z</sup>	Pod Length (cm)	Pod Straightness <sup>y</sup>	Pod Cross Section <sup>x</sup>	Pod Smoothness <sup>w</sup>	Shiny or dull	Pod Color <sup>v</sup>	Notes <sup>u</sup>
6144	52	7	7	9.5	5	round	7	shiny	7	seedy 5 sv, seed developing in 4 sv, mixed in 3 sv
6145	50	8	6	11.5	7	round	7	shiny	7	seedy 5 sv, seed developing in 4 sv
6146	39	5	3	9.5	5	heart to round	7	shiny	7	mixed seed development in 5 sv, seed just beginning to develop in 4 sv
6148	50	7	7	10.0	7	round	5	shiny	5	seedy in 5 sv, mixed seed development in 4 sv
6149	51	7	7	10.0	7	round	5	shiny	9	moderately seedy 4 sv, 3 sv looks good
6150	34	6	4	11.0	7	round	7	shiny	7	seedy 5 sv, 4 sv mixed seed development
6151	37	5	4	14.0	2	round	7	dull	5	moderately seedy 5 sv, seed developing in 4 sv
6154	50	7	8	11.0	5	heart	7	shiny	7	seedy 4 sv, moderately seedy 3 sv
6156	45	5	6	10.0	9	round to cb	7	dull	7	moderate seed development in 5 sv, 4 sv OK
6157	36	6	7	13.0	5	round	5	dull	5	mixed seediness in 5 sv, light to moderate seed development in 4 sv
6158	38	6	6	13.0	4	round	3	shiny	7	5 sv moderately seedy, 4 sv OK; tends to have blanks
6162	44	5	4	11.5	9	round	7	shiny	7	5 sv moderately seedy, mixed seed development in 4 sv
6172	41	6	6	15.0	3	heart	7	shiny	9	seedy 5sv, moderate seed development in 4 sv; dark green interior
6174	47	6	6	15.0	5	round	5	dull	7	seedy 5 & 6 sv, moderately seedy 4 sv
6175	49	7	7	13.5	6	round	7	dull	7	seedy 5 & 6 sv, mixed seed development in 4 sv
6178-3	42	7	7	10.0	7	round	7	shiny	5	seedy 5 sv, 4 sv beginning to develop seeds
6178-5	46	5	7	9.5	7	round	5	shiny	5	5 sv seedy, seed developing in 4 sv; 1 pod with string
6179	41	8	8	12.0	7	oval to heart	5	dull	7	moderate seed development in 4 sv, 3 sv OK
6180	47	9	8	12.5	7	round	5	shiny	6	mixed seed development in 4 sv, 3 sv ok
6182	51	6	6	11.5	7	heart to round	9	dull	7	moderately seedy 4 sv, 3 sv OK; may be a long/short pod mix
6186	55	9	9	10.0	7	round	5	dull	6	seedy 4 & 5 sv, mixed seeds in 3 sv; flowery odor & flavor
6187	54	7	9	9.0	7	round	4	shiny	6	5 & 6 sv seedy, 4 sv fairly seedy; short pod; nice reverse curve

Table 14. Notes on preliminary small sieve green bean lines, May 15 planting, Corvallis, 2003 (cont.).

Line	Plant Height (cm)	Growth Habit Preliminary <sup>z</sup>	Growth Habit at Harvest <sup>z</sup>	Pod Length (cm)	Pod Straightness <sup>y</sup>	Pod Cross Section <sup>x</sup>	Pod Smoothness <sup>w</sup>	Shiny or dull	Pod Color <sup>v</sup>	Notes <sup>u</sup>
6188	50	6	7	13.0	7	heart to round	7	dull	6	seedy 5 sv, 4 sv developing seeds; 2-tone pod color
6190	42	6	7	11.0	7	round to cb	7	dull	7	seed developing in 6 sv; segregating for pod length
6197	45	5	4	13.0	5	round	7	shiny	7	seedy 4 & 5 sv, mixed seed development in 3 sv; frequent strings
6198	55	7	6	9.5	8	round	7	dull	9	5 sv very seedy, 4 sv fairly seedy
6199	60	8	8	9.5	8	heart	7	dull	4	5 sv seedy, 4 sv OK
6211	48	6	7	11.5	7	round	4	dull	5	mixed seed development in 4 & 5 sv
6215	58	7	8	12.5	3	round	5	shiny	5	5 sv seedy, 4 sv moderately seedy, 3 sv OK
6219	52	5	7	10.5	9	heart	7	shiny	9++	moderately seedy 5 sv, 4 sv ok; very dark green pods
6220	47	7	9	9.5	9	round	5	dull	7	3 & 4 sv seedy, 2 sv OK
6222	55	8	9	11.0	5	heart	3	shiny	9	5 sv seedy, 4 sv OK; color variable--lots of two tone
6223	50	8	9	9.5	7	round	9	shiny	5	5 sv seedy, 4 sv mixed seed development
										5 sv mixed seed development, 4 sv moderately seedy,
6224	49	6	6	10.5	9	round	7	shiny	5	moderately seedy 5 & 6 sv, seeds developing in 4 sv
6225	33	4	2	13.0	.5	heart	4	dull	5	6 sv seedy, 5 sv mixed, 4 sv moderately seedy; may be segregating for pod length--some very long
6227	42	5	5	14.0	5	round	7	dull	7	mixed seed development in 5 sv, 4 sv OK
6228	47	7	9	9.5	9	round	7	dull	6	

<sup>z</sup>Scores based on 1-9 scale with 9 = most upright. Preliminary growth habit readings taken July 17; harvest readings taken day of harvest.

<sup>y</sup>Scores based on a 1-9 scale with 9 straightest

<sup>x</sup>Cross section: cb = crease-back

<sup>w</sup>Scores based on a 1-9 scale with 9 smoothest

<sup>v</sup>Scores based on a 1-9 scale with 9 darkest

<sup>u</sup>Notes: sv = sieve; pc = persistent color

91G	5	1	16.5	3	heart to round	5	5	5	7	1 some ovalness in this trial (not oval rogues) and some blanking; seedy 6 sv, moderately seedy in 5 sv, 4 sv ok
OR54	5	3	16.5	5	round	4	5	7	7	1 quintessential BBL; some blonding; very seedy 6sv, seedy 5 sv, and moderately seedy 4 sv.
5630	3	1	16.0	5	round	7	5	5	7	1 contains oval off type; much blonding; long BBL type; seedy 6 sv, moderately seedy 5 sv, seed development beginning in 4 sv.
5635	9	3	15.0	5	round	5	5	7	5	1 many 2 tone pods; very seedy 6 sv, seedy 5 sv, moderately seedy 4 sv
5669	5	5	14.0	5	round	5	5	9	7	1 seedly 5 & 6 sv, moderate seed development in 4 sv; a few oval pods
5699	7	1	15.0	5	round	7	5	7	7	1 typical BBL with pods similar to 5669; seedy 6 sv, 5 sv moderately seedy and seed development beginning in 4 sv
5706	5	1	17.0	5	round	5	5	5	7	1 very long podded BBL; battered in grader; very seedy 6 sv, seedy 5 sv, mixed seed development in 4 sv
5996	3	3	14.0	6	heart	7	7	3	9	1 very strong bitter flavor; slightly oval in this trial; pc type with very uniform pod color; seedy 6 sv, moderately seedy 5 sv, seed development beginning in 4 sv
5998	7	7	15.0	4	heart to round	5	9	3	9	1 very large sv, extreme green; dull; only moderate seed development in 5 & 6 sv; 4 sv OK; strong bitter flavor
5999	3	3	15.0	7	round	9	7	7	7	1 seedy 6 sv, moderate seed development in 4 sv
5998	3	3	12.0	7	oval to heart	7	7	7	7	1 seedy 6 sv, mixed seed development in 4 & 5 sv; oval tendency in this trial; leggy, somewhat floppy plant but better than 91G; pc type
6104	3	1	14.0	5	heart	7	4	5	5	1 oval tendency with moderate reverse curve; seedy 5 & 6 sv, moderate seed development in 4 sv
6126	7	5	16.0	5	round	7	7	5	7	1 very nice BBL; dark green pod; good flavor; moderate battering in grader; seed beginning in 5 & 6 sv, 4 sv ok

Table 17. Notes on preliminary full sieve green bean lines, June 24 planting, Corvallis, 2003<sup>z</sup> (cont.)

Line	Growth Habit <sup>y</sup>	Concen-tration <sup>x</sup>	Length (cm)	Straight-ness <sup>w</sup>	Cross Section <sup>v</sup>	Smooth-ness <sup>u</sup>	Color <sup>1</sup>	Flavor <sup>s</sup>			Notes <sup>t</sup>	
								Sweet-ness	Astrin-gency	Bean-ness	Perfume	
6134	9	3	15.0	6	heart to round	5	7	5	9	7	1	BBL pod type; variable in color from extreme green to "normal" BBL color; some blonding; long slender pod with oval tendency; moderate seed development in 5 & 6 sv, 4 sv beginning
6137	3	3	16.0	5	round	7	9	6	7	7	1	extreme green, shiny; either some blonding or some light colored off types; moderate seed development in 5 & 6 sv, 4 sv beginning
6152	3	7	14.4	5	oval to heart	7	7	5	9	5	1	sharp bitter edge to flavor; dark green BBL type; variable for pod cross section; moderately seedy 6 sv, 4 & 5 sv ok; much battering in grader
6165	7	3	15.0	5	round	5	6	5	8	7	1	moderate seed development in 4 & 5 sv, beginning in 3 sv; line might go full sieve if not too indeterminate; very dark green interior; strong reverse curve; large heavy, floppy plant; BBL pod
6169	7	3	17.0	3	round	7	6	5	7	7	1	long podded dark green BBL type; moderate seed development in 5 & 6 sv, beginning in 4 sv
6170	9	7	16.0	5	heart	5	7	5	7	5	1	extremely long pods with some reverse curve; dark green BBL type; moderate seed development in 6 sv, 4 & 5 sv ok
6176	9	3	16.0	4	heart	5	6	5	7	7	1	long slender BBL pod; moderate seed development in 5 & 6 sv, 4 sv beginning.
6183	3	7	14.0	5	round	7	7	7	7	7	1	strong reverse curve; moderately shiny dark green pod; moderately seedy 6 sv, seed development beginning in 5 sv, 4 sv ok
6185	3	4	15.0	5	round	9	9	5	5	5	1	shiny extreme green pods; very smooth, some blanks in 6 sv; moderately seedy 5 & 6 sv, 4 sv ok
6189	7	9	14.0	7	round	5	6	5	8	5	1	long BBL pods; fair amount of battering in grader, many crushed ends in 5 & 6 sv; moderately seedy 5 & 6 sv, 4 sv ok
6193	9	7	15.5	6	cb	-7	8	7	5	5	1	long slender dark green BBL pod; strong internal cavitation in 6 sv; moderately seedy 5 & 6 sv, 4 sv OK
6195	9	3	16.0	5	heart	7	7	5	7	7	1	long slender dark green BBL type pod; moderately seedy 5 sv, seed beginning in 4 sv, 3 sv ok; a number of bumpy podded rogues in this trial

Table 17. Notes on preliminary full sieve green bean lines, June 24 planting, Corvallis, 2003<sup>z</sup> (cont.)

Line	Growth Habit	Concen-tration <sup>x</sup>	Length (cm)	Straight-ness <sup>w</sup>	Cross Section <sup>y</sup>	Smooth-ness <sup>u</sup>	Color <sup>t</sup>	Flavor <sup>s</sup>			Notes <sup>r</sup>
								Sweet-ness	Astrin-gency	Bean-ness	
6204	5	7	15.0	5	round	7	7	5	5	5	strong reverse curve; long slender BBL pod; moderate seed development in 5 & 6 sv, 4 sv ok; very wiry stems and strong root system--somewhat hard picking
6207	1	5	14.0	5	round	5	5	6	7	7	BBL type pod; some 2 tone and blonding; moderately seedy 6 sv, little seed development in 4 & 5 sv; very large podded
6212	9	3	14.0	7	round	7	6	3	9	3	fairy long pods; moderate seed development in 6 sv, seed development beginning in 5 sv, 4 sv ok; very astringent

<sup>z</sup>There was very heavy, lush growth in this trial, with white mold beginning as of 8/20. Very few lines with erect habit in Trial 2 show good habit in this trial. Some traditional BBL types are extremely matted with chlorotic leaves and blond pods at the bottom of the mat, but little white mold in this yet.

<sup>y</sup>Scores based on 1-9 scale with 1 = flat and 9 = upright

<sup>x</sup>Scores based on 1-9 scale with 1 = concentrated and 9 = indeterminate

<sup>w</sup>Scores based on a 1-9 scale with 9 straightest

<sup>v</sup>Cross section: cb = crease-back

<sup>u</sup>Scores based on a 1-9 scale with 9 smoothest

<sup>t</sup>Scores based on a 1-9 scale with 9 darkest

<sup>s</sup>Scores based on a 1-9 scale with 9 strongest

<sup>r</sup>Notes: sv = sieve; pc = persistent color, BBL = bush blue lake

Table 18. Notes on preliminary small sieve green bean lines, June 24 planting, Corvallis, 2003<sup>2</sup>

Line	Growth Habit <sup>x</sup>	Concen-tration <sup>x</sup>	Length (cm)	Straight-ness <sup>w</sup>	Cross Section <sup>y</sup>	Smooth-ness <sup>u</sup>	Color <sup>t</sup>	Sweet-ness	Astrin-gency	Flavor <sup>s</sup>	Bean-ness	Perfume	Notes <sup>f</sup>
Minette	9	7	11.0	6	round	6	5	5	7	3	3	3	shiny, fairly short, yellow-green pods; moderate seed development in 5 sv, no seed development in 3 & 4 sv.
5613	6	7	13.0	7	heart	7	4	7	5	7	3	3	moderately seedy 4 sv, mixed seed development in 3 sv, 2 sv ok
5835	9	3	14.5	7	oval	7	5	7	7	7	1	1	strongly oval with flat mix in this trial; seedy in 5 sv, moderately seedy 4 sv, mixed seed development in 3 sv
5944	7	5	12.5	7	oval	9	5	7	7	5	5	5	seedy 4 sv, 2 & 3 sv ok; very indeterminate in this trial and showing more oval tendency
5902	5	3	12.5	5	heart	3	5	7	7	7	1	1	round seed which contributes to bumpy appearance in young pods; moderately seedy 4 sv, 2 & 3 sv ok
6100	9	3	14.0	9	round	7	4	7	7	7	1	1	moderately seedy 4 sv, 3 sv OK
6008	3	5	11.5	9	oval to heart	9	9	5	7	7	1	1	seedy 6 sv, moderately seedy 5 sv, seed development beginning in 4 sv; very straight smooth bean, but oval; pc type
6118	7	5	15.0	7	flat to oval	5	1	7	5	5	1	1	very long slender 3 sv with strong oval tendency, appears to have a flat mix as well; color is too light; moderate seed in 4 sv, 2 & 3 sv ok
6123	9	7	12.0	7	oval to heart	7	3	5	3	7	3	3	mod seed development in 5 sv, seed development beginning in 4 sv, 3 sv ok; pod color too light; oval tendency
6127	7	5	12.0	7	round	7	6	7	7	7	1	1	very nice looking pods for length, color, straightness and smoothness; moderately seedy 5 sv, 4 sv beginning to develop seed and beginning to look bumpy, 3 sv ok
6128	5	9	14.0	7	round	7	7	4	6	6	5	1	long slender, straight, dark green BBL pods; fairly pronounced curve indicative of high fiber; moderately seedy 5 sv, 4 sv beginning, 3 sv ok
6129	5	3	15.0	5	heart	6	6	5	7	5	1	1	long slender BBL pods; moderate seed development in 5 sv, mixed in 4 sv, 3 sv ok
6130	5	7	16.5	5	heart	5	5	5	7	7	1	1	long slender smooth pod with significant blonding; moderate seed development in 5 & 6 sv, beginning in 4 sv

Table 18. Notes on preliminary small sieve green bean lines, June 24 planting, Corvallis, 2003 (cont.)<sup>x</sup>

Line	Growth Habit <sup>y</sup>	Concen-tration <sup>x</sup>	Length (cm)	Straight-ness <sup>w</sup>	Cross Section <sup>v</sup>	Smooth-ness <sup>u</sup>	Color <sup>t</sup>	Flavor <sup>s</sup>			Notes <sup>r</sup>		
								Sweet-ness	Astringency	Beaniness	Perfume		
6131	3	7	16.0	7	heart to round	7	6	5	5	5	1	fairly bland flavor; variable pod color from shading; long slender bean; seedy 5 sv, mixed seed development in 4 sv, 3 sv ok	
6138	3	7	15.0	5	round	5	6	5	7	7	1	reverse curve; slender BBL pod; seedy 6 sv, moderately seedy 4 & 5 sv	
6140	7	3	11.5	7	round	9	5	5	9	5	3	Minuette pod type; moderate seed development in 5 sv, mixed in 4 sv, 3 sv ok	
6141	5	7	11.5	9	round	7	5	7	7	7	1	round seeded; low yielding; moderate seed development in 5 sv, 3 & 4 sv ok	
6142	7	7	11.5	7	heart	6	7	5	5	5	1	round seed; Minuette type pod; seedy 5 sv, 4 sv moderately seedy, 3 sv ok	
6143	7	5	10.5	7	round	5	5	5	7	5	5	Minuette type pod but getting bumpy before seed develops; moderately seedy 5 sv, 3 & 4 sv ok; some blonding	
6144	9	5	12.5	7	oval to heart	5	6	5	8	7	1	shiny Minuette type pod; moderately seedy 5 sv, 3 & 4 sv ok	
6145	7	7	10.5	8	round	7	6	5	7	5	3	shiny Minuette pod type; moderately seedy 4 & 5 sv, 3 sv ok	
6146	7	3	11.0	8	round	3	5	5	7	5	1	shiny Minuette pod type; significant blonding; bumpy; moderate seed development in 5 sv, 3 & 4 sv ok	
6148	9	5	11.0	7	round	7	6	5	7	5	3	slightly earlier and darker podded Minuette type; some blonding; moderately seedy 5 sv, seed beginning in 4 sv, 3 sv ok	
6149	9	5	11.0	7	round	5	4	5	7	3	9	shiny podded Minuette type; bumpy with round seed; moderately seedy 5 sv, 4 sv beginning to develop seed, 3 sv ok	
6150	7	7	12.5	9	round	5	6	5	5	5	1	Minuette pod type; shiny; bumpy with round seed; moderately seedy 4 & 5 sv, 3 sv beginning to develop seed	
6151	7	3	15.0	7	heart	7	4	7	5	5	1	long slender pods; moderate seed development in 4 & 5 sv, 3 sv ok; 5 sv showing internal cavitation	
6154	9	5	12.0	6	round	7	5	5	7	5	3	long 3 sv similar to 5613; bumpy in 4 sv; seedy 4 sv, seed development beginning in 3 sv, 2 sv ok	

Table 18. Notes on preliminary small sieve green bean lines, June 24 planting, Corvallis, 2003 (cont.)<sup>z</sup>

Line	Growth Habit <sup>y</sup>	Concen-tration <sup>x</sup>	Length (cm)	Straightness <sup>w</sup>	Cross Section <sup>v</sup>	Smooth-ness <sup>u</sup>	Flavor <sup>s</sup>			Notes <sup>t</sup>
							Sweet-ness	Astrin-gency	Bean-ness	
6156	5	5	10.5	5	heart to round	7	7	7	7	strong reverse curve; crease-back in 6 sv; round seed; some battering in grader; moderately seedy 5 & 6 sv; mixed in 4 sv; classified as a 4 sv previously, but appears to be more of a short podded full sieve
6157	3	7	15.5	5	round	7	6	7	5	very long slender pods; some blonding from shading; seedy 6 sv, moderately seedy 5 sv, mixed in 4 sv
6158	5	5	14.0	7	round	7	7	3	5	moderate reverse curve, 5 & 6 sv have some blanks and a junky appearance; 5 & 6 sv moderately seedy, 3 & 4 sv ok
6162	3	5	13.5	5	round	9	7	7	5	fairly long, dark green, dull pods with reverse curve; looks like a 60-70% 1-4 sv bean; seedy 5 & 6 sv, moderate development in 4 sv
6172	3	5	15.5	7	heart	6	9	5	7	moderately seedy 5 & 6 sv, 4 sv ok; dull extreme green; some color variation in pods
6174	7	7	15.0	5	round	5	7	7	7	long slender dark green BBL type with very nice pods; very good interior color; mixed seed development in 6 sv, moderately seedy in 4 & 5 sv, 3 sv ok; may be close to a full sv line
6175	7	7	14.5	6	round	7	7	5	6	long slender dark green BBL type; some blonding; seedy 5 sv, moderately seedy 3 & 4 sv
6178-3	9	7	11.5	8	round	7	7	5	7	pleasant beany flavor; Minuette pod type; shiny; some blonding; moderately seedy 5 sv, 3 & 4 sv ok; better of the two sub lines
6178-5	9	5	11.0	7	round	7	5	5	7	Minuette type pod; mixed seed development in 4 sv, 3 sv ok
6179	7	9	13.4	7	heart	5	3	5	7	long, straight, dull, light green pods; seedy 5 sv, moderately seedy 4 sv, 3 sv ok
6180	5	5	14.0	7	heart to round	5	5	5	5	long and slender; smoother than typical BBL; moderate seed development in 5 sv, mixed in 4 sv, 3 sv ok
6182	5	9	12.5	7	round	9	6	5	7	mixed seed development in 4 & 5 sv, 3 sv ok; a long slender 3-4 sv, very smooth

**Table 18. Notes on preliminary small sieve green bean lines, June 24 planting, Corvallis, 2003 (cont.)<sup>z</sup>**

Line	Growth Habit	Concen- tration <sup>x</sup>	Length (cm)	Straight- ness <sup>w</sup>	Cross Section <sup>v</sup>	Smooth- ness <sup>u</sup>	Color <sup>t</sup>	Sweet- ness	Astrin- gency	Flavor <sup>s</sup>	Beani- ness	Perfume	Notes <sup>r</sup>
6186	3	5	12.5	7	round to cb	5	5	7	7	7	3		short straight dark green pods; moderately seedy 6 sv, seed development beginning in 5 sv, 4 sv ok
6187	5	7	12.0	7	heart to round	7	7	5	7	5	3		fairy short pod; reverse curve; seedy 6sv, moderately seedy 5 sv, 4 sv ok
6188	3	7	14.0	9	heart	9	6	5	5	7	1		long slender 4 sv; moderate seed development in 5 sv, beginning in 4sv, 3 sv ok
6190	7	7	14.0	6	round	5	7	5	5	6	1		pods heavily battered in grader; strong reverse curve; moderate seed development in 5 & 6 sv, 4 sv ok
6197	9	5	14.0	6	heart to round	5	6	7	7	5	1		some blonding but otherwise a very nice, dark green, slender podded line; seedy 5 sv, seed beginning in 4 sv, 3 sv ok
6198	7	5	12.0	8	heart	6	8	5	9	7	1		somewhat astringent flavor; very dark (extreme) green shiny Minuette type pod; 5 sv seedy and very shiny, moderately seedy 4 sv, and seed development beginning in 3 sv
6199	3	7	11.0	7	oval	9	5	5	7	5	1		Strong reverse curve that decreases with increasing sieve size (4 & 5 sv are mostly straight); strongly oval in this trial; Minuette pod shape with BBL appearance; seedy 5 sv, moderately seedy 4 sv, 3 sv beginning seed dev.
6211	9	7	11.5	9	heart	7	7	5	5	9	1		may have a full sv BBL mix; dark green Minuette type pod; moderately seedy 4 & 5 sv, 3 sv beginning to develop seed
6215	9	7	14.5	5	round	7	6	5	9	7	1		long slender pod; seed development beginning in 5 sv, other sv's ok
6219	3	5	10.5	7	round	3	9	5	7	3	7		Minuette pod; extreme dark green (this is the darkest pod in the trial--a good dark-podded parent in a study of pod color inheritance); gets bumpy even when seed are young; moderate seed development in 5 sv, 3 & 4 sv ok; poor plant habit and yield
6220	9	9	10.0	9	round	7	7	5	5	7	1		very petite podded line; dark green; very straight and smooth; seedy 4 sv, no seed development in 2 & 3 sv

<sup>z</sup>Two ratings were taken in each plot if there were sufficient plants; scores based on a 1-5 scale, with 1 = very light surface infection and 5 = roots mostly dead and plants stunted.

<sup>y</sup>Ratings were done for each variety when pods had reached 50% buckskin stage.

<sup>x</sup>Scores based on 1-5 scale, with 5 = upright.

<sup>w</sup>Fiber: L = low, M = moderate, H = high, S = segregating.

<sup>v</sup>Vigor scores take into account both plant size and yield, and are based on 1-10 scale with 10 = most vigorous
