---

## Abstract

Pollinators are currently experiencing widespread population decline, thus plant-pollinator networks are of particular interest and concern in the ecological community. This study investigates whether phylogenetic relatedness of plant families is correlated with the families of pollinators they share. Phylogenetic trees of plant and pollinator families present at the H.J. Andrews Experimental Forest were produced using software associated with the National Center for Biotechnology Information (NCBI). These phylogenies and plant-pollinator interaction data were analyzed in a pairwise family comparison using the Jaccard index. The study found that there is a weak negative correlation between phylogenetic distance of plant families and the percent of pollinator families they share, although many closely related plant families share few pollinator families, likely due to evolutionary differentiation of flower morphology.

## Introduction

Plants and their insect pollinators are currently undergoing a global decline and are of particular relevance to ecological, biological, and conservation studies (Poron et al. 2016). The study of plant-pollinator networks is conducive to understanding dynamic ecological processes and creating biological models that have the potential to inform conservation decisions regarding the preservation of biodiversity and ecosystem health (Poron et al. 2016). Additionally, nearly 90 percent of flowering plants rely on animal pollinators to reproduce, including agricultural crops (Burkle et al. 2013). Hence, plant-pollinator networks are of particular relevance in the current ecological discussion.

Despite the abundance of literature regarding plant-pollinator networks and the behaviors of common pollinators such as the European honeybee (*Apis mellifera*) and the bumblebee (*Bombus sp.*), there is little published literature regarding how phylogeny of plants and pollinators influences the way in which these networks are structured and how their components interact. Johnson and Steiner (2000) examine the driving factors behind generalization versus

specialization in plant-pollinator networks. One such driver they discuss is phylogenetic relatedness, stating that “Unrelated plants that share similar pollinators often show convergent suites of floral traits known as pollination syndromes” (Johnson and Steiner, 2000). The study also asserts that these pollination syndromes are greatly limited by the phylogenetics of the flowering plants, thus plant morphology is dictated by evolutionary processes as well as phylogenetic parameters (Johnson and Steiner, 2000).

However, a study conducted by Schemske and Bradshaw investigates the “pollinator discrimination in two closely related species of monkeyflowers that differ in their major pollinators” (Schemske and Bradshaw, 1999). Their findings call into question the widespread belief that pollinators tend to be generalists and thus do not strongly influence the evolution of flower morphology (Schemske and Bradshaw, 1999). These findings are supported by the claim that “many bee species show narrow host-plant preferences, reflected both in behavior and morphological adaptations to particular attributes of host-plant pollen or floral morphology” (Patiny et al. 2007).

Despite these studies, it is difficult to encounter literature that focuses on implications of phylogeny within plant-pollinator networks rather than implications of convergent evolution and phylogeny on the insect and plant species themselves. This study investigates the phylogeny of plant families as a potential explanation for the interactions in plant-pollinator networks in the montane meadows of the Western Cascades Range.

The goal of this study is to examine the relationship between phylogenetic relatedness of plant families and the degree to which they share interactions with the same pollinator families. In other words, how does phylogenetic relatedness of plant families correlate with frequency of interactions by members of the same pollinator families? I hypothesize that increasing phylogenetic distance between plant families will correlate with decreasing percent of shared pollinator families.

Additionally, this study aims to add to the ongoing plant-pollinator study at the H.J. Andrews Experimental Forest by publishing phylogenies of Andrews-specific plant and pollinator families which have never before been constructed.

## Methods

### Field Methods

H.J. Andrews Experimental Forest is located in Blue River, Oregon in the Western Cascade Mountain Range. The Forest is 15,800 acres, is encompassed by temperate coniferous forest (Jones 2016), and “is a center for forest and stream ecosystem research in the Pacific Northwest” (AND LTER). H.J. Andrews is an NSF-funded long term ecological research site (LTER) and is thus conducive to conducting ongoing studies. Within the Forest exist montane meadows that were selected for plant-pollinator network research based on a “stratified-random

design” (Pfeiffer 2012). Fifteen meadows were originally “stratified by size (large, small) and meadow complexes were stratified by isolation; one large meadow and two small meadows were randomly chosen from each complex”, though only twelve of these meadows are a part of this study (Pfeiffer 2012). Each meadow complex (Carpenter, Frissell, Lookout) contains four meadows, each with ten three-by-three meter plots. Thus 120 plots are included in this study.

All 120 plots were sampled on five different occurrences from June to August 2011-2017. Each plot watch involved a survey of all flower species in anthesis and a 15 minute period in which all plant-pollinator interactions were recorded. See Jones, J.; Pfeiffer, V. 2017 for complete documentation of the field sampling process.

## Analytical Methods

This analysis uses interaction data from 2011 to 2016 that have been edited and refined by data management processes. The 2017 data have been excluded from this study, as they have not yet been reviewed. Additionally, some legacy data from 2011 and 2012 that included sampling meadows in Bunchgrass and Cone complexes were discarded as these complexes were excluded from the study after 2012.

In order to examine how phylogenetic relatedness of plant families correlates with the percent of interactions by the same pollinator families, these phylogenies must first be created. No such phylogenies have yet been compiled and published by the H.J. Andrews LTER. Two lists, one of all observed plant species, the other of all observed pollinator species, were obtained from the compiled 2011-2016 data using R Studio software by Joshua B. Griffin (see Appendix II.1).

The pollinator phylogeny was created using taxonomy published on bugguide.net, an online database of “insects, spiders, & their kin for the United States & Canada”, hosted by the Iowa State University Department of Entomology, as well as the second edition of American Insects by Ross H. Arnett, Jr.. Each pollinator entry in the existing data was assigned to its appropriate family using these two resources. The plant phylogeny was created using the taxonomy provided by online databases from the National Center for Biotechnology Information (NCBI) and the United States Department of Agriculture Natural Resources Conservation Service. Each plant species was thus assigned to its appropriate family. This procedure produced two lists: all plant families and all pollinator families observed in plant-pollinator interactions from 2011-2016.

Phylogenies of both plant and pollinator families were constructed using the NCBI supported software phyloT and iTOL. The list of families was entered into phyloT, which “generates phylogenetic trees based on the NCBI taxonomy” (Letunic 2017). The trees were then visualized using the online Interactive Tree of Life software (iTOL). See Figures 1a and 2 in Results. This study examines shared pollinators as a function of phylogenetic distance between

plant families, which necessitates the implementation of metrics to quantify this distance. Table 1 shows the relevant Linnaean hierarchy used to classify and relate the plant families.

**Table 1. Outline of the methodology used to assign distance values to phylogenetic nodes on the plant family phylogeny.** Whereas animal phylogeny is clearly defined into Linnaean groups such as Class, Order, Family, Subfamily, Tribe, etc., botanical phylogenies are often not as clearly defined, as shown below.

Linnaean hierarchical rank	Assigned value	Example (Plants)
Family	0	Apiaceae
Suborder/tribe	1	Apiineae
Order	2	Apiales
Clade/Subclass	3	Campanulids
Clade	4	Asterids
Subclass	5	Petrosaviidae
Clade	6	Pentapetalae
Clade	7	Gunneridae
Monophyletic clade/Class	8	Eudicotyledons
One of two principal clades within the flowering plants	9	Mesangiospermae

### Obtaining phylogenetic distance between plant families

The plant family produced by phyloT and iTOL did not include data for branch length or distance between terminal taxa; thus shorthand distance metrics were implemented. Using the phylogeny produced by iTOL, values were assigned to each node on the tree. The terminal taxa received a “distance score” of zero and each node at a subsequently higher resolution received a subsequently larger distance score. These distance scores range from zero to nine based on the relative coarseness of each node. See Figure 1b for the plant phylogeny annotated with distance scores.

Distance between each pair of plant families was calculated by traversing the phylogeny from one terminal taxa to another, summing each node on the pathway. The data were compiled into a matrix, referred to as the “phylogenetic distance matrix”.

## Obtaining percent of pollinator families shared between plant families

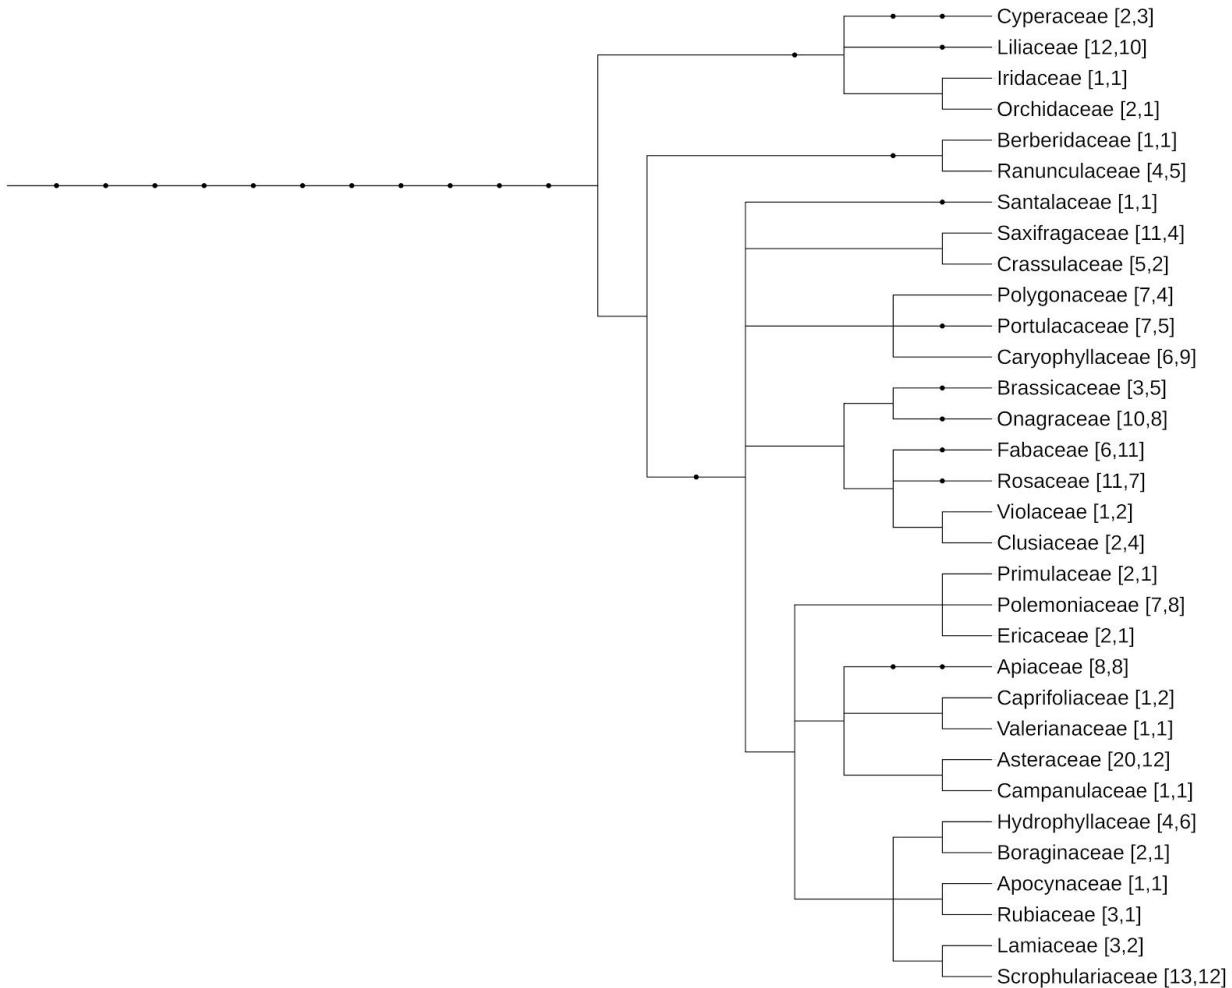

The compiled 2011-2016 interaction data was pared down to the relevant data entries: number of interactions, plant species name, and pollinator species name. Using the previously created lists (plant species & respective families, pollinator species & respective families), the plant species and pollinator species names were replaced with corresponding family names in the pared interactions data.

Using RStudio and code created by Joshua B. Griffin (see Appendix II.2), the percentage of shared pollinator families was calculated for each pair of plant families using the Jaccard index. This code conducts a pairwise analysis of two pollinator families and their interactions, determining how many pollinator families are observed interacting with both plant family 1 and plant family 2 (the intersection of the two family sets). This intersection value is then divided by the total number of pollinators that interact with these families (the union of the two family sets), producing the percent of pollinators that interact with both families in question. This algorithm was run on every combination of plant families and the results were transformed into a matrix whose entries are percentages of shared pollinator families, referred to as the “shared pollinator matrix”.

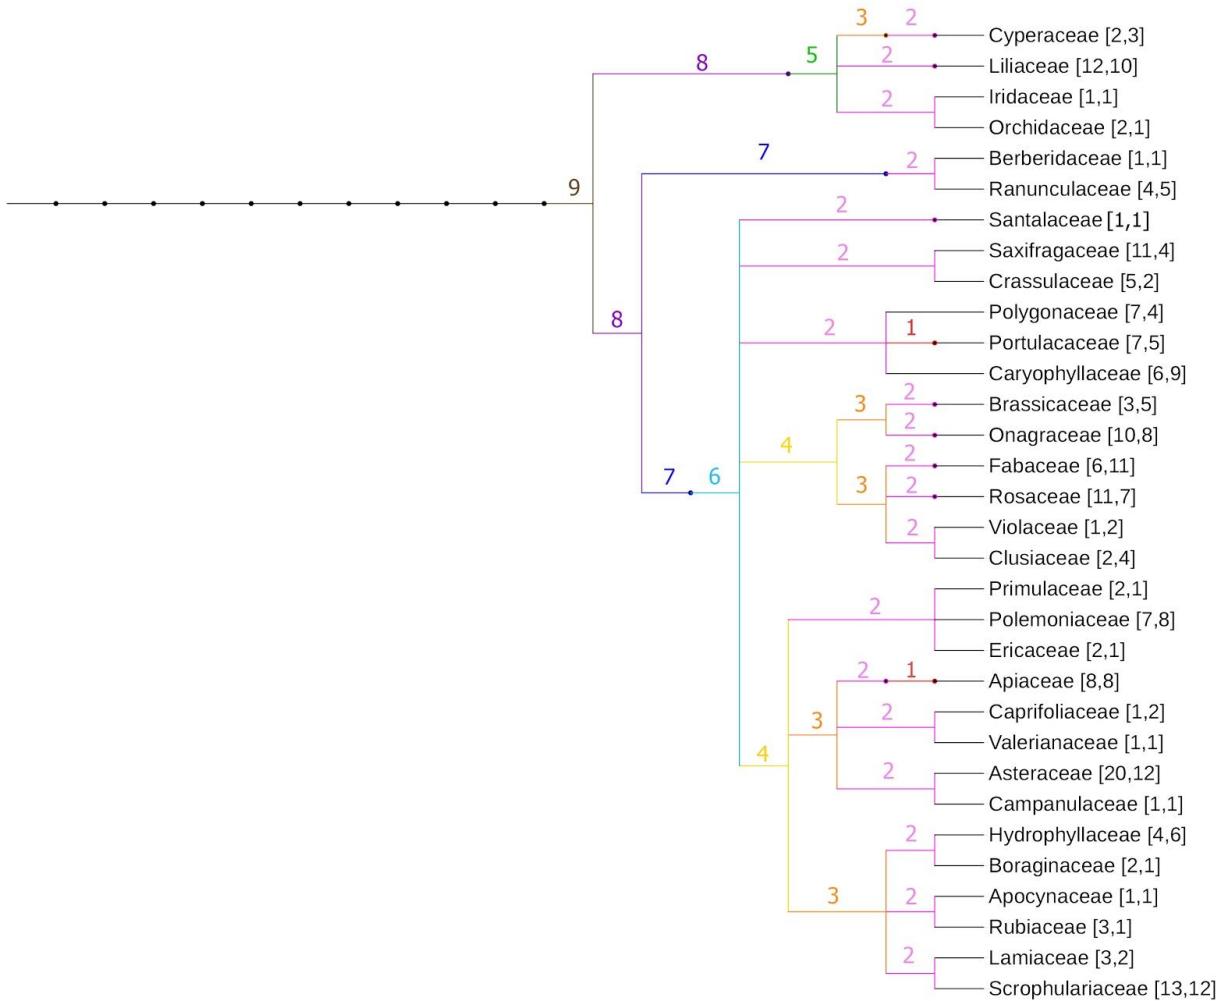

## Plotting the relationship between phylogenetic distance and percent shared pollinators

Using code written in part by Lydia S. Miller and Dr. Rebecca A. Hutchinson (see Appendix II.3), the phylogenetic distance and shared pollinator matrices were plotted as a scatterplot, with the matrices as the x and y axes, respectively (see Figure 3). The resulting scatterplot was then analyzed with a linear regression using RStudio software. Multiple points in the scatterplot were selected for further examination due to exceptionally high or low percent of shared pollinators. These were isolated using code developed in part by Dr. Rebecca A. Hutchinson (see Appendix II.4) and are presented in Table 2.

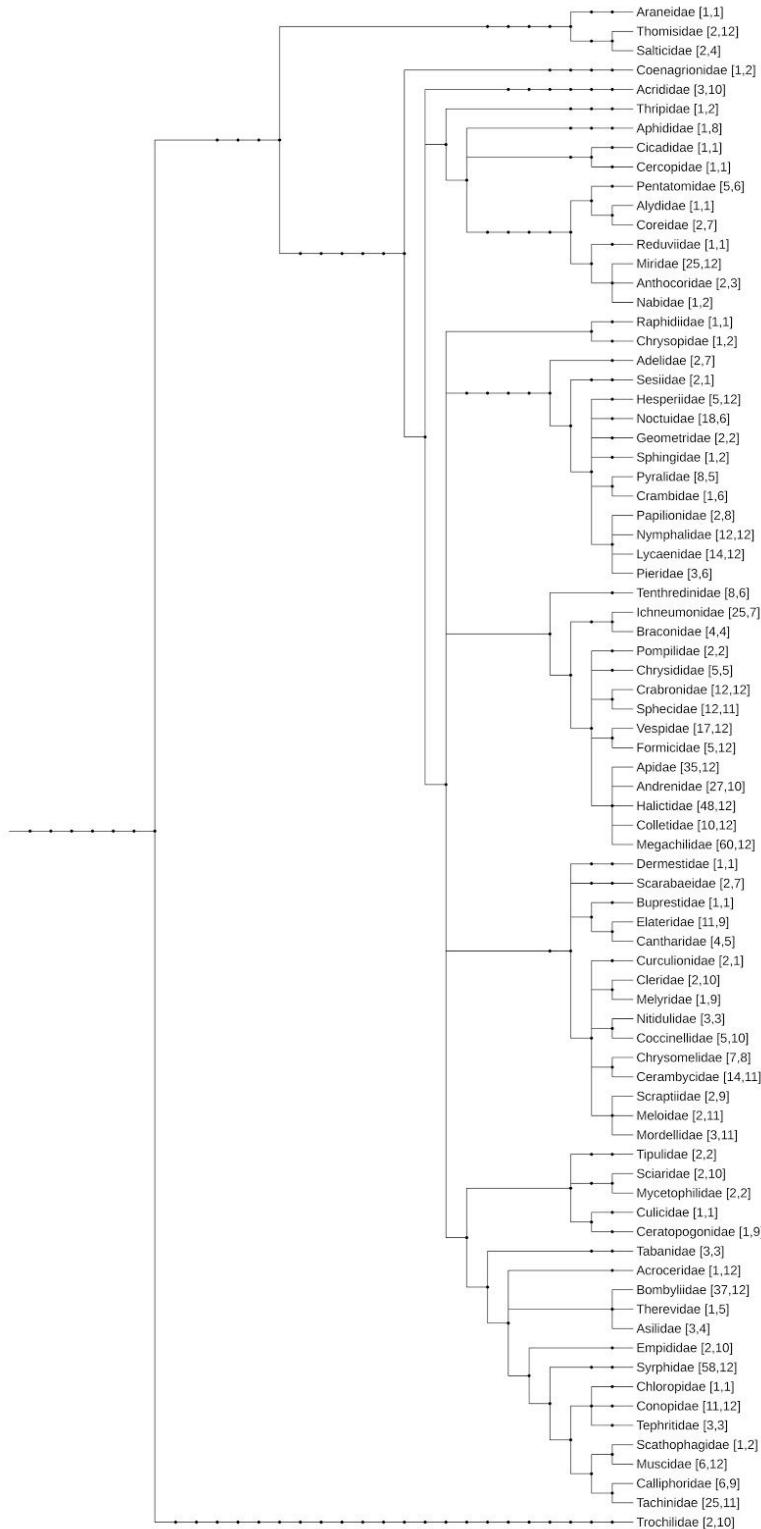

## Results

**Figure 1a. Annotated phylogeny of plant families.** The plant family phylogeny was constructed via phyloT and iTOL using NCBI taxonomy for all observed plant families (2011-2016). Each terminal taxa is annotated with the number of observed species within the family and the number of meadows in which the plant family is present.

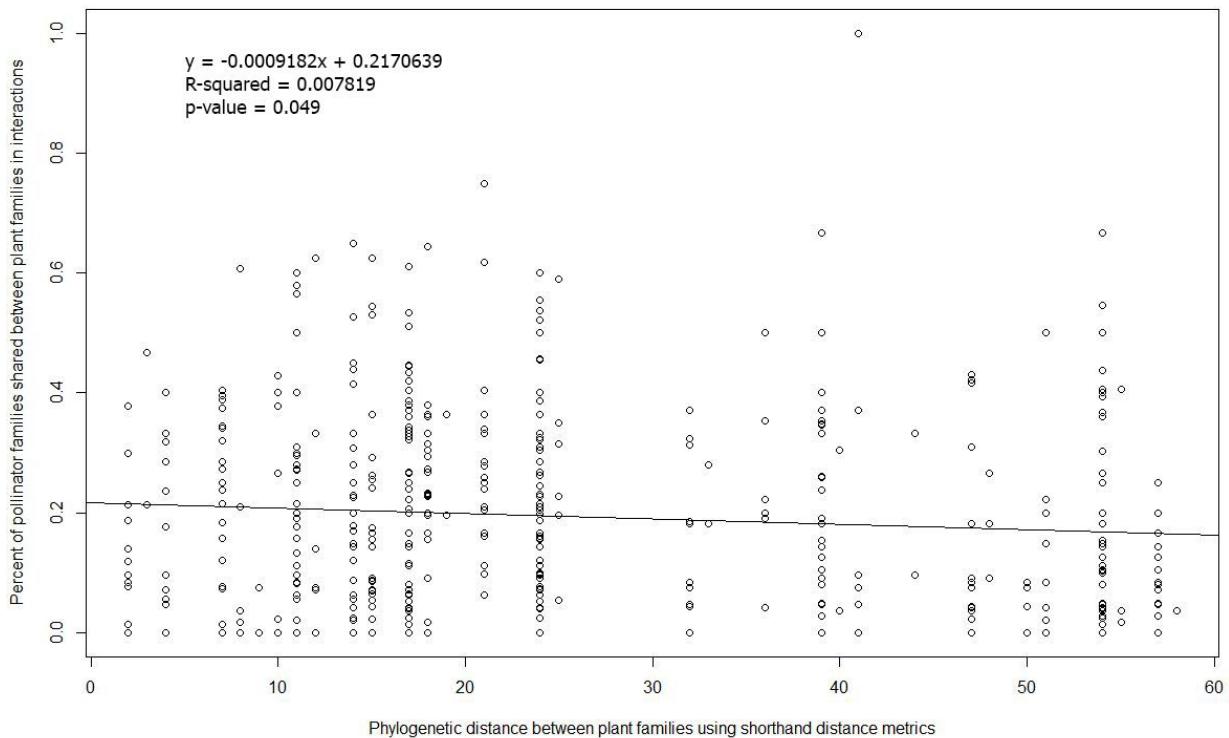

**Figure 1b. Phylogeny of plant families annotated with distance scores.** The phylogeny of plant families was produced by phyloT and iTOL using NCBI taxonomy for all observed plant families (2011-2016). Each terminal taxa is given a distance score of zero. Each subsequent node possesses a distance score greater by one integer, corresponding to relatively lower or coarser taxonomic resolution. Using Figure 1b, each node “traversed” on the path from one terminal taxa to another was summed and the resulting sum was used as the distance between two terminal taxa.

**Figure 2. Annotated phylogeny of pollinator families.** The pollinator family phylogeny was produced by phyloT and iTOL using NCBI taxonomy for all observed pollinator families

(2011-2016). Each terminal taxa is annotated with the number of observed species within the family and the number of meadows in which the pollinator family is present.

**Figure 3. Relationship of shared pollinator family interactions as a function of phylogenetic distances between pairwise comparisons of plant families.** Figure 3 depicts a slightly negative relationship (slope equal to -0.0009182) between phylogenetic distance between plant families and percent of pollinator families that interact with both plants. Each point on the plot represents a pair of plant families. The R-squared value of this regression is very low, at 0.007819. The p-value given by this regression is just barely significant at the ecological threshold with a value of 0.049.

**Table 2. Points of interest due to their high percentage of pollinator families shared.** Table 2 shows the seven points with the highest percent of pollinator families shared. The phylogenetic distance between the families is listed in the rightmost column; this value may range from two to 58.

Plant families compared	Percent of pollinator families shared	Phylogenetic distance
Berberidaceae x Orchidaceae	75	41
Violaceae x Orchidaceae	66.7	54
Boraginaceae x Orchidaceae	66.7	54
Berberidaceae x Violaceae	66.7	39
Boraginaceae x Berberidaceae	66.7	39
Polemoniaceae x Polygonaceae	64.9	14
Apiaceae x Polygonaceae	64.5	18

**Table 3. Percent of pollinators shared between plant families with low phylogenetic distance.** Table 3 shows the percent of pollinators shared between plant families in which the phylogenetic distance between the families is the lowest possible distance score (2).

Plant families compared	Phylogenetic distance	Percent of pollinators shared
Iridaceae x Orchidaceae	2	0
Berberidaceae x Ranunculaceae	2	9.5
Caryophyllaceae x Polygonaceae	2	21
Crassulaceae x Saxifragaceae	2	38
Polemoniaceae x Ericaceae	2	8.3
Polemoniaceae x Primulaceae	2	14
Ericaceae x Primulaceae	2	30
Campanulaceae x Asteraceae	2	1.4
Valerianaceae x Caprifoliaceae	2	7.7
Apocynaceae x Rubiaceae	2	0
Scrophulariaceae x Lamiaceae	2	12
Hydrophyllaceae x Boraginaceae	2	19

**Table 4. Percent of pollinator families shared and phylogenetic distance values for plant families compared with *Orchidaceae*.** Table 4 shows the phylogenetic distances between *Orchidaceae* and other plant families which share pollinators at a high percent or at zero percent.

Family compared with <i>Orchidaceae</i>	Percent of pollinators shared with <i>Orchidaceae</i>	Phylogenetic distance between listed family and <i>Orchidaceae</i>
Berberidaceae	75	41
Violaceae	66.7	54
Boraginaceae	66.7	54
Iridaceae	0	2
Santalaceae	0	47
Valerianaceae	0	54
Apocynaceae	0	54

## Discussion

Figure 3 suggests that there is a small negative correlation between phylogenetic distance between plant families and the percent of pollinators shared between these families. This provides very minimal support for the alternative hypothesis that increasing phylogenetic distance between plant families correlates with decreasing percent of shared pollinators. This suggests a weak relationship and the low R-squared value of 0.007819 obtained by the linear regression implies that phylogenetic distance poorly explains the way plant families interact with pollinator families. However, the statistical analysis of the scatterplot returned a p-value of 0.049, which is just barely significant under the ecological significance threshold of 0.05. Hence, the relationship between phylogeny of plant families and the pollinator families that they share is weakly statistically significant, but bears more investigation, as phylogenetic distance and shared pollinators are somehow related.

Tables 2 and 3 emphasize a lack of strong correlation between phylogenetic distance of plant families and percent of shared pollinator families. For example, Table 2 shows that the two plant families with the largest shared percent of pollinators (75%) are separated by 41 distance units, while another two families share 64.9% of pollinator families and have only 14 distance units separating them. Table 3 shows that the plant families separated by the lowest distance unit (2) vary greatly in the percent of pollinator families that they share (0% to 38%). Additionally, none of the plant families separated by only two distance units are present in the list of families that share the highest percent of pollinator families.

Table 4 illuminates some interesting points regarding the plant family *Orchidaceae*.

*Orchidaceae* is involved in many of the comparisons that yield some of the highest and lowest percentage of shared pollinator families. For example, *Orchidaceae* is one of the families in the pairwise comparison that shares the highest percent of pollinator families (75%). Two other families compared with *Orchidaceae* share greater than 66% of their pollinator families. Interestingly, *Orchidaceae* is also involved in four comparisons in which the two families share 0% of their pollinators. The distance between *Orchidaceae* and the other families of interest ranges from 2 units to 54 units, which further emphasizes that the relationship between phylogenetic distance of plant families and the percent of shared pollinator families is weak. However, the distance variability of the plant families with which *Orchidaceae* overlaps is interesting in light of a host of other explanations for the reasoning behind plant-pollinator interactions.

The effects of coevolution on both plants and pollinators as well as convergent evolution of plant family morphology may play a role in which pollinator families are shared. Lunau states that “Diffuse coevolution between angiosperm species and pollinating insects may cause frequent convergent evolution of floral traits such as nectar reward” (Lunau 2004).

Phylogenetically distant plant families may share a large percent of their pollinator families due to similar flower morphology produced by convergent evolution. Likewise, while plant families that are phylogenetically close may be similar in some ways, their morphology may differ in others that have a higher degree of influence on pollinator interactions. For example, one theory suggests that flowers that coexist evolve distinct morphologies so as to avoid resource overlap (Kodric-Brown and Brown, 1979). See Figure 4 for a visual representation of this theory.

**Figure 4. Flower morphology comparison between species of the families *Liliaceae* and *Apiaceae*.** Species representatives of the family *Liliaceae* are shown in the top two photos (species one and two), while species representatives of the family *Apiaceae* are shown in the bottom two photos (species three and four).

*Liliaceae* and *Apiaceae* differ by 55 distance units; only three units away from the maximum phylogenetic distance. Within *Liliaceae*, species one and two are morphologically very different, even though they are closely related. Within *Apiaceae*, species three and four look quite similar, likely due to their high degree of phylogenetic relatedness. Although *Liliaceae* and

*Apiaceae* differ greatly in their placement on the phylogeny of plant families, species one shares some morphological characteristics with species three and four. For example, the stamens of species one extend above its petals, as is the case with species three and four. Additionally, the inflorescences of species three and four are structured as umbels. While species one does not possess the same structure, its inflorescence is more similar to the *Apiaceae* species than it is to the other species in its family (species two). Figure 4 thus illustrates the concept that factors such as flower morphology and accessibility to pollinators vary between and within plant families, an alternative explanation for the ways in which plants and pollinators interact.

## Conclusions

This study set out to investigate the question “How does phylogenetic relatedness of plant families correlate with frequency of interactions by members of the same pollinator families?”. It was found that phylogenetic relatedness of plant families and shared pollinator families are related, though only weakly in the way in which this study chose to investigate.

Kodric-Brown and Brown (1979) discuss the theory that coexisting plants evolve different morphology and phenology in order to avoid competition for pollinator species (Kodric-Brown and Brown, 1979). A design for a further study may include determining which plant families are most often found to coexist and determining the extent to which these families share pollinator families. In this study, rather than construct a phylogenetic distance matrix for all combinations of plant families, one could construct a “coexistence matrix” based on a developed “coexistence score” between each combination of plant families. This matrix could then be plotted against the “shared pollinators matrix” from the current study and analyzed using the same statistical methods.

Additionally, there are a handful of factors in question that may be points of improvement in this study. There are implications to conducting this study at the taxonomic level of family as opposed to higher or lower resolutions. An interesting complement to this study would be an investigation that runs the same analyses on a variety of taxonomic levels with regard to the plants. Another factor that this study does not address is the fact that not all plants and pollinators are equally involved in the observed interactions. Some plant and pollinator families are involved in the majority of recorded interactions, whereas others may appear in the data only a handful of times. This can be partially visualized by observing Figures 1a and 2, as not all plant or pollinator families are observed in every meadow, nor do all families, plant or pollinator, possess equal numbers of species. One last interesting addition to the current study involves conducting the analysis the opposite direction. This reversal would investigate whether phylogenetic relatedness of pollinator families corresponds to the percent of plant families shared between pollinator families.

In conclusion, the current study illuminates some of the challenges of phylogenetic analyses, as phylogenetic relatedness does not always fully explain biological processes. Perhaps

morphology and character development resulting from evolutionary processes such as natural selection, in concert with phylogeny, allow scientists to better understand complex ecological phenomena, including plant-pollinator networks.

## Acknowledgments

I would like to thank Dr. Julia A. Jones, Dr. Rebecca A. Hutchinson, Dr. Andrew R. Moldenke, and Dr. Desiree D. Tullos for supporting me throughout this process by sharing their wealth of knowledge, encouraging me to persevere through the many challenges I experienced in this work, and fostering my love of science and learning. I would like to thank Mark Schulze, the administration, and researchers at the H.J. Andrews Experimental Forest for the opportunity to conduct research at the LTER and for the important research they continue to do. I would also like to thank Oregon State University and the Eco-Informatics Summer Institute for this incredible opportunity. Lastly, I would like to thank the incredible Stephanie Bianco for her continual support and mentorship, as well as my extremely talented colleagues Joshua B. Griffin, Andrew N. Guide, Lydia S. Miller, Elaina G. Thomas, Brent Davis, Peter Duin, Malia Gonzales, Sashka Warner, and Adam Zhang for sharing their knowledge, dedication, humor, and love.

Epilobium ciliatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Onagraceae	Epilobium	ciliatum
Epilobium oregonense (=E. alpinum gracillimum)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Onagraceae	Epilobium	oregonense
Epilobium paniculatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Onagraceae	Epilobium	paniculatum
Erigeron aliceae	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Erigeron	aliceae
Erigeron foliosus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Erigeron	foliosus
Eriogonum compositum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Eriogonum	compositum
Eriogonum nudum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Eriogonum	nudum
Eriogonum umbellatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Eriogonum	umbellatum
Eriophyllum lanatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Eriophyllum	lanatum
Erysimum asperum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Brassicaceae	Erysimum	asperum
Erythronium grandiflorum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Erythronium	grandiflorum
Eucephalus ledophyllus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Aster	ledophyllus
Fragaria virginiana	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Fragaria	virginiana
Galium aparine	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rubiaceae	Galium	aparine
Galium oreganum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rubiaceae	Galium	oreganum
Galium trifidum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rubiaceae	Galium	trifidum
Gayophytum diffusum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Onagraceae	Gayophytum	diffusum
Gayophytum humile	Eukaryota	Plantae	Tracheophyta	Angiospermae	Onagraceae	Gayophytum	humile
Gilia capitata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Gilia	capitata
Haplopappus hallii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Haplopappus	hallii
Heracleum maximum (= H. lanatum)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Heracleum	maximum
Hieracium cynoglossoides	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Hieracium	cynoglossoides
Holodiscus discolor	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Holodiscus	discolor
Holodiscus dumosus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Holodiscus	dumosus
Hydrophyllum occidentale	Eukaryota	Plantae	Tracheophyta	Angiospermae	Hydrophyllaceae	Hydrophyllum	occidentale
Hypericum anagalloides	Eukaryota	Plantae	Tracheophyta	Angiospermae	Clusiaceae	Hypericum	anagalloides
Hypericum perforatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Clusiaceae	Hypericum	perforatum
Ipomopsis aggregata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Ipomopsis	aggregata

Iris chrysophylla	Eukaryota	Plantae	Tracheophyta	Angiospermae	Iridaceae	Iris	chrysophylla
Lathyrus nevadensis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Fabaceae	Lathyrus	nevadensis
Lewisia triphylla	Eukaryota	Plantae	Tracheophyta	Angiospermae	Portulacaceae	Lewisia	triphylla
Ligusticum grayi	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Ligusticum	grayi
Lilium pardalinum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Lilium	pardalinum
Linanthus capillaris	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Linanthus	capillaris
Lithophragma parviflora	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Lithophragma	parviflora
Lithophragma tenellum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Lithophragma	tenellum
Lomatium martindalei	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Lomatium	martindalei
Lomatium triternatum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Lomatium	triternatum
Lotus micranthus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Fabaceae	Lotus	micranthus
Lotus nevadensis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Fabaceae	Lotus	nevadensis
Luina stricta	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Luina	stricta
Lupinus laxiflorus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Fabaceae	Lupinus	laxiflorus
Madia minima	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Madia	minima
Mertensia bella	Eukaryota	Plantae	Tracheophyta	Angiospermae	Boraginaceae	Mertensia	bella
Mertensia paniculata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Boraginaceae	Mertensia	paniculata
Mimulus breweri	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Mimulus	breweri
Mimulus guttatus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Mimulus	guttatus
Mimulus moschatus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Mimulus	moschatus
Mimulus rubellus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Mimulus	rubellus
Mimulus tilingii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Mimulus	tilingii
Mitella pentandra	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Mitella	pentandra
Montia parvifolia	Eukaryota	Plantae	Tracheophyta	Angiospermae	Portulacaceae	Montia	parvifolia
Montia siberica (misid. As Claytonia s.)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Portulacaceae	Montia	siberica
Mycelis muralis (= Lactuca m.)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Mycelis	muralis
Navarretia divaricata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Navarretia	divaricata
Orthocarpus imbricatus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Orthocarpus	imbricatus
Osmorrhiza sp X	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Osmorrhiza	sp
Paxistima myrsinoides	Eukaryota	Plantae	Tracheophyta	Angiospermae	Celastraceae	Paxistima	myrsinoides
Penstemon cardwellii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Penstemon	cardwellii
Penstemon procerus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Penstemon	procerus
Perideridia gairdneri	Eukaryota	Plantae	Tracheophyta	Angiospermae	Apiaceae	Perideridia	gairdneri
Phacelia hastata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Hydrophyllaceae	Phacelia	hastata
Phacelia heterophylla	Eukaryota	Plantae	Tracheophyta	Angiospermae	Hydrophyllaceae	Phacelia	heterophylla
Phlox diffusa	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Phlox	diffusa
Phlox gracilis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Phlox	gracilis
Platanthera dilatata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Orchidaceae	Platanthera	dilatata
Platanthera sparsiflora	Eukaryota	Plantae	Tracheophyta	Angiospermae	Orchidaceae	Platanthera	sparsiflora
Polemonium carneum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polemoniaceae	Polemonium	carneum
Polygonum douglasii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Polygonum	douglasii
Polygonum minimum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Polygonum	minimum
Polygonum phytolaccifolium	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Polygonum	phytolaccifolium
Potentilla glandulosa	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Potentilla	glandulosa
Potentilla gracilis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Potentilla	gracilis
Prunella vulgaris	Eukaryota	Plantae	Tracheophyta	Angiospermae	Lamiaceae	Prunella	vulgaris
Rainiera stricta (= Luina s.)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Rainiera	stricta
Ranunculus uncinatus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Ranunculaceae	Ranunculus	uncinatus
Ribes viscosissimum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Grossulariaceae	Ribes	viscosissimum
Romanzoffia thompsonii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Hydrophyllaceae	Romanzoffia	thompsonii
Rosa gymnocarpa	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Rosa	gymnocarpa
Rubus parviflorus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Rubus	parviflorus
Rudbeckia occidentalis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Rudbeckia	occidentalis
Rumex acetosella	Eukaryota	Plantae	Tracheophyta	Angiospermae	Polygonaceae	Rumex	acetosella
Sagina saginoides	Eukaryota	Plantae	Tracheophyta	Angiospermae	Caryophyllaceae	Sagina	saginoides
Saxifraga ferruginea	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Saxifraga	ferruginea
Saxifraga integrifolius	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Saxifraga	integrifolius
Saxifraga occidentalis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Saxifraga	occidentalis
Saxifraga oregana	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Saxifraga	oregana
Scirpus sp.	Eukaryota	Plantae	Tracheophyta	Angiospermae	Cyperaceae	Scirpus	sp
Sedum oreganum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Crassulaceae	Sedum	oreganum
Sedum oregonense	Eukaryota	Plantae	Tracheophyta	Angiospermae	Crassulaceae	Sedum	oregonense
Sedum spathulifolium	Eukaryota	Plantae	Tracheophyta	Angiospermae	Crassulaceae	Sedum	spathulifolium
Sedum stenopetalum	Eukaryota	Plantae	Tracheophyta	Angiospermae	Crassulaceae	Sedum	stenopetalum
Senecio integerrimus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Senecio	integerrimus
Senecio triangularis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Senecio	triangularis
Sibbaldia procumbens	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Sibbaldia	procumbens
Silene douglasii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Caryophyllaceae	Silene	douglasii
Smilacina racemosa	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Smilacina	racemosa
Smilacina stellata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Smilacina	stellata
Solidago canadensis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Solidago	canadensis
Sorbus sitchensis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Rosaceae	Sorbus	sitchensis
Stachys chamissonis var. cooleyae (= S. cooleyae)	Eukaryota	Plantae	Tracheophyta	Angiospermae	Lamiaceae	Stachys	chamissonis
Stachys cooleyae	Eukaryota	Plantae	Tracheophyta	Angiospermae	Lamiaceae	Stachys	cooleyae
Stellaria crispa	Eukaryota	Plantae	Tracheophyta	Angiospermae	Caryophyllaceae	Stellaria	crispa
Symporicarpus mollis	Eukaryota	Plantae	Tracheophyta	Angiospermae	Caprifoliaceae	Symporicarpus	mollis
Taraxacum officinale	Eukaryota	Plantae	Tracheophyta	Angiospermae	Asteraceae	Taraxacum	officinale
Tellima grandiflora	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Tellima	grandiflora
Tiarella trifoliata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Tiarella	trifoliata
Tillaea erecta	Eukaryota	Plantae	Tracheophyta	Angiospermae	Crassulaceae	Tillaea	erecta
Tolmiea menziesii	Eukaryota	Plantae	Tracheophyta	Angiospermae	Saxifragaceae	Tolmiea	menziesii
Vaccinium alaskaense	Eukaryota	Plantae	Tracheophyta	Angiospermae	Ericaceae	Vaccinium	alaskaense

Valeriana scouleri	Eukaryota	Plantae	Tracheophyta	Angiospermae	Valerianaceae	Valeriana	scouleri
Vancouveria hexandra	Eukaryota	Plantae	Tracheophyta	Angiospermae	Berberidaceae	Vancouveria	hexandra
Veronica serpyllifolia	Eukaryota	Plantae	Tracheophyta	Angiospermae	Scrophulariaceae	Veronica	serpyllifolia
Vicia americana	Eukaryota	Plantae	Tracheophyta	Angiospermae	Fabaceae	Vicia	americana
Viola orbiculata	Eukaryota	Plantae	Tracheophyta	Angiospermae	Violaceae	Viola	orbiculata
Xerophyllum tenax	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Xerophyllum	tenax
Zigadenus venenosus	Eukaryota	Plantae	Tracheophyta	Angiospermae	Liliaceae	Zigadenus	venenosus

## 2. Pollinator Phylogeny

NAME IN DATABASE	DOMAIN	KINGDOM	PHYLUM	CLASS	ORDER	FAMILY	GENUS	SPECIES
Acridid sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Orthoptera	Acriidae		
Acridid sp 16-3	Eukaryota	Animalia	Arthropoda	Insecta	Orthoptera	Acriidae		
Acridid sp 2	Eukaryota	Animalia	Arthropoda	Insecta	Orthoptera	Acriidae		
Adela sp 16-1	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Adelidae	Adela	sp
Adela trisignata	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Adelidae	Adela	trisignata
Agapostemon virescens	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Halictidae	Agapostemon	virescens
Agulla sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Neuroptera	Raphidiidae	Agulla	sp
Alticina sp 16-1	Eukaryota	Animalia	Arthropoda	Insecta	Coleoptera	Chrysomelidae		
Alydidae sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hemiptera	Alydidae		
Alypia langtoni	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Noctuidae	Alypia	langtoni
Alypia sp 15-1	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Noctuidae	Alypia	sp
Ammophila sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Sphecidae	Ammophila	sp
Ammophila sp 15-1 prostrate hair	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Sphecidae	Ammophila	sp
Ammophila sp 15-2	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Sphecidae	Ammophila	sp
Ammophila sp 3	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Sphecidae	Ammophila	sp
Anaspis rufa	Eukaryota	Animalia	Arthropoda	Insecta	Coleoptera	Scaptiidae	Anaspis	rufa
Anastrangalia laetifica	Eukaryota	Animalia	Arthropoda	Insecta	Coleoptera	Cerambycidae	Anastrangalia	laetifica
Ancistrocerus sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Vespidae	Ancistrocerus	sp
Ancistrocerus sp 2	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Vespidae	Ancistrocerus	sp
Andrena (Micrandrena) sp 3	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena birtwelli	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	birtwelli
Andrena buckelli	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	buckelli
Andrena columbiana	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	columbiana
Andrena melanochroa	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	melanochroa
Andrena nigrocaerulea	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	nigrocaerulea
Andrena peritristis carliniformis	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena prunorum	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	prunorum
Andrena scutellinitens	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	scutellinitens
Andrena sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 14-1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 15-1 black tessellate	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 19	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 2	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 3	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 4A	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 4C	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 5A	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 5B	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 5C	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 7	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena sp 8	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	sp
Andrena vicina	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	vicina
Andrena vicinoides	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Andrenidae	Andrena	vicinoides
Anthaxia sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Coleoptera	Buprestidae	Anthaxia	sp
Anthidium sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Anthidium	sp
Anthidium sp 14-1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Anthidium	sp
Anthidium sp 2	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Anthidium	sp
Anthidium sp 4	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Anthidium	sp
Anthidium sp 5	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Anthidium	sp
Anthocaris sara	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Pieridae	Anthocaris	sara
Anthocopa abjecta abjecta	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	sp
Anthocopa abjecta alta	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	sp
Anthocopa copelandica	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	copelandica
Anthocopa oregonia	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	oregona
Anthocopa sp 15-1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	sp
Anthocopa sp 16-1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Anthophoridae	Anthocopa	sp
Anthocorid sp 2	Eukaryota	Animalia	Arthropoda	Insecta	Hemiptera	Anthocoridae		
Anthophora urbana	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Anthophora	urbana
Anthrax sp X1	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Bombyliidae	Anthrax	sp
Aphid sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Homoptera	Aphididae		
Apis mellifera	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Apis	mellifera
Araniella displicata	Eukaryota	Animalia	Arthropoda	Arachnida	Araneae	Araneidae	Araniella	displicata
Arctophila flagrans	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Syrphidae	Arctophila	flagrans
Asemosyrphus polygrammus	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Syrphidae	Asemosyrphus	polygrammus
Ashmeadiella sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Megachilidae	Ashmeadiella	sp
Asilid genus 1	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Asilidae		
Asilid sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Asilidae		
Asilid sp 16-1	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Asilidae		
Bembicine sp 1	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Crabronidae	Bembicine	sp

Bembix amoena	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Ceratidae	Bembix	amoena
Blera scitula	Eukaryota	Animalia	Arthropoda	Insecta	Diptera	Syrphidae	Blera	scitula
Boloria epithore	Eukaryota	Animalia	Arthropoda	Insecta	Lepidoptera	Nymphalidae	Boloria	epithore
Bombus appositus	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	appositus
Bombus bifarius	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	bifarius
Bombus californicus	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	californicus
Bombus fernaldae	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	fernaldae
Bombus flavifrons	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	flavifrons
Bombus griseocollis	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	griseocollis
Bombus insularis	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	insularis
Bombus melanopygus	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	melanopygus
Bombus mixtus	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	mixtus
Bombus nevadensis	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	nevadensis
Bombus occidentalis	Eukaryota	Animalia	Arthropoda	Insecta	Hymenoptera	Apidae	Bombus	occidentalis

## Appendix II. Code

### 1. Code used to produce plant & pollinator species lists Used by Joshua B. Griffin

```
int_data = read.csv("2011-16_interactions.csv")
plant_spec_names <- levels(as.factor(int_data$PLTSP_NAME))
poll_spec_names <- levels(as.factor(int_data$VECT_NAME))
```

### 2. Code used to calculate the Jaccard index for shared pollinator families in pairwise comparisons of plant families

Developed by Joshua B. Griffin

```
calculate_percent_shared <- function(){
  family <- read.csv("familyfix.csv")
  plantfam <- levels(family[,2])
  pnfam <- levels(family[,3])

  myArray <- array(0, dim = c(length(plantfam),length(pnfam)), dimnames =
list(plantfam,pnfam))

  for(i in 1:dim(family)[1]){
    myArray[family[i,2],family[i,3]] = 1
  }

  num_sets <- choose(dim(myArray)[1],2)

  idx_sets <- generate_idx_sets(myArray[,1])

  myDimnames <- generate_dimnames(idx_sets,plantfam)

  perc_arr <- array(NA, dim = c(1,num_sets),dimnames = list("Intersection/Union
%",myDimnames[]))

  for(i in 1:dim(idx_sets)[2]){
    perc_arr[i] = compare(myArray[idx_sets[1,i],],myArray[idx_sets[2,i],])
  }

  return(perc_arr)
}

compare <- function(set1,set2){
```

```

same <- 0
different <- 0
for(i in 1:length(set1)){
  if(set1[i] == set2[i]){
    if(set1[i] == 1){
      same = same + 1
    }
  }
  else{
    different = different + 1
  }
}
union = different + same

percent <- same/union
return(percent)
}

generate_idx_sets <- function(set1){

  num_sets <- choose(length(set1),2)

  indices_to_compare <- array(NA,dim = c(2,num_sets))

  counter <- 1

  for(i in 1:length(set1)){
    for(j in 1:length(set1)){
      if(j>i){
        indices_to_compare[1,counter] = i
        indices_to_compare[2,counter] = j
        counter = counter + 1
      }
    }
  }
  return(indices_to_compare)
}

generate_dimnames <- function(idx_sets,plantfam){

  dimnames <- list()

  for(i in 1:dim(idx_sets)[2]){
    dimnames[i] = paste(plantfam[idx_sets[1,i]],plantfam[idx_sets[2,i]],sep = " X ")
  }

  return(dimnames)
}

perc_arr <- calculate_percent_shared()

```

### 3. Code used to format the phylogenetic distance matrix and the Jaccard index

Developed in part by Dr. Rebecca A. Hutchinson and Lydia S. Miller

```
plantnames=read.csv("plantnames.csv")$NAME
pfmatrix=matrix(0,nrow=length(plantnames),ncol=length(plantnames),dimnames=list(plantnames,plantnames))

for(i in 1:length(perc_arr)){
  name=dimnames(perc_arr)[[2]][i]
  x=strsplit(name, " ")[[1]][1]
  y=strsplit(name, " ")[[1]][3]
  pfmatrix[which(plantnames==x),which(plantnames==y)]=perc_arr[i]
  pfmatrix[which(plantnames==y),which(plantnames==x)]=perc_arr[i]
}

diag(pfmatrix) = 1
View(pfmatrix)
percshared=pfmatrix
```

### 4. Code used to plot the phylogenetic distance and percent shared pollinator matrices and to isolate points of interest

Developed in part by Dr. Rebecca A. Hutchinson

```
phyloDists = read.csv("dist.csv",row.names=1)
plot(phyloDists[lower.tri(phyloDists)],percshared[lower.tri(percshared)],xlab="Phylogenetic distance between plant families using shorthand distance metrics",ylab="Percent of pollinator families shared between plant families in interactions")
title("Percent of shared pollinator family interactions as a function of phylogenetic distance between plant families")

model =
lm(pollShare~plantDist,data=data.frame(pollShare=percshared[lower.tri(percshared)],plantDist=phyloDists[lower.tri(phyloDists)]))
summary(model)
coef(model)
summary(model)$r.squared
abline(a=coef(model)[1],b=coef(model)[2])

which(percshared==max(percshared),arr.ind = TRUE)
table(percshared)
which(percshared==0.75,arr.ind = TRUE)
which(percshared>0.666 & percshared<0.6666666666666667,arr.ind=TRUE)
which(percshared>0.649 & percshared<0.65,arr.ind=TRUE)
which(percshared>0.645 & percshared<0.646,arr.ind=TRUE)
which(phyloDists==0,arr.ind=TRUE)
which(phyloDists>0 & phyloDists<3,arr.ind=TRUE)
```
